ABSTRACT

The Phase VIIA Architectural Survey of Arlington County was conducted between December 2002 and December 2003 by the architectural and historic preservation firm of E.H.T. Tracerics, Inc. under the direction of the Arlington County Department of Community Planning, Housing and Development. The project consisted of the reconnaissance survey of 550 properties encompassing approximately 150 acres that represent the areas and periods of significance of Arlington County as defined in the Phase I Architectural Survey Report, prepared in 1996. This most recent survey focused on the completion of the reconnaissance survey documentation of the Waverly Hills, Columbia Forest, Fillmore Garden Apartments, and Woodmont in Neighborhood Service Areas B, F, and G. The phases conducted to date collectively have documented 5,726 properties in Arlington County.

As stated in the historic context, completed as part of the Phase I Architectural Survey in 1996, the period of significance for Arlington County began in 1674 with the patenting of the Howson Tract. The development and growth of the county was directly related to Washington, D.C. and the federal presence as early as 1791, when the land was surveyed as part of the nation's capital. Returned to the Commonwealth of Virginia by the United States Congress in 1846, Arlington officially separated from the City of Alexandria in 1870. Adopting the name Arlington County in 1920, the community then began its greatest phase of development, growing from a population of 16,000 in 1920 to 170,936 in 1990. Today, almost all of the land in Arlington has been developed, and consists of extensive single-family residential neighborhoods, and areas where commercial buildings, offices, and multiple-family dwellings dominate.

The Phase I on-site reconnaissance survey, which was to consist of 750 properties, centered on the residential neighborhoods of southern Arlington, specifically Neighborhood Service Areas F, G, and H, as well as selected Target Areas. The substantial number of properties within this part of southern Arlington County that had reached the fifty-year-age limit set by the federal and state governments prompted a reduction of the date guidelines. The on-site survey included the Target Areas -- Nauck, Columbia Heights West, and Arna Valley -- and 95% of Neighborhood Service Area H with a total of 761 resources documented. Phase II, conducted in 1997, continued the reconnaissance survey process within specified Neighborhood Service Areas F, G and H. This phase of on-site survey identified 1,015 properties, thereby comprehensively documenting all resources erected prior to 1936 in southern Arlington County. Phase III of the project included the identification, documentation, and assessment of 776 additional properties in central Arlington County. Specifically, during this stage of the project, Neighborhood Service Area D, Barcroft, Claremont, and Columbia Forest in Service Area F, and the community of North Highlands in Service Area E were targeted.

Phase IV focused on the major commercial and transportation sector known as the Rosslyn-Ballston or Metro Corridor. Running northeast to southwest, the corridor roughly flanks Wilson Boulevard from Rosslyn to George Mason Drive in Ballston within Neighborhood

Service Areas D and E. A small portion of Service Area C is also included in the Corridor, specifically in the neighborhood of Stonewall Jackson (also known as Bluemont). The corridor, one of Arlington's two Metrorail transit corridors targeted for high-density development, is approximately three-quarters of a mile wide and three miles long. A total of 805 properties were documented in the eastern part of the Corridor during Phase IV. Phase V continued the survey efforts of Phase IV, focusing on the documentation of 809 properties at the western end of the Rosslyn-Ballston. The work completed the documentation of Ashton Heights and Lyon Village, progressing into Ballston-Virginia Square. The Phase VI recorded 1,010 buildings in Ballston-Virginia Square in Service Area D and a portion of Stonewall Jackson in Service Area C, Waycroft-Woodlawn and Langston-Brown in Service Area A, and GlebeWood and Waverly Hills in Service Area B. This has resulted in the comprehensive survey of the Rosslyn-Ballston or Metro Corridor to include all properties constructed prior to 1954.

Phase VIIA, the most recent survey, focused on the documentation of 550 properties, the majority of which were located in Waverly Hills. This work was conducted specifically to aid in the preparation of a National Register of Historic Places historic district nomination. Similarly, the twenty buildings making up the Fillmore Garden Apartments in the neighborhood of Penrose were included in the survey. Initially intended to part of the Penrose National Register Historic District, Fillmore Garden Apartments developed as a separate multiple-family complex at the western edge of a single-family neighborhood. Therefore, the apartment complex was not included in the historic district and has been documented for possible nomination in the future. A section of Columbia Forest was also included in the survey. Located to the west of South Frederick Street along 11th Street, South, these properties were initially believed to have been developed by the Defense Homes Corporation (DHC). Research concluded the dwellings post-date the development of Columbia Forest by the DHC and thus the buildings were not included in the historic district. The Phase VIIA survey was concluded in the neighborhood of Woodmont, which is located in Service Area B.

Thus, to date, all of Neighborhood Service Areas D, E, F, G, and H have been comprehensively surveyed to include all properties constructed prior to 1936 or 1954 as specified by the development periods of those areas. Additional survey has occurred in those areas as potential historic districts are studied. Further, on-site survey has been completed in the neighborhoods of Langston-Brown and Waycroft-Woodlawn in Service Area A; GlebeWood, Waverly Hills, Cherrydale, and Maywood in Service Area B; and part of Bluemont in Service Area C. The Historic Preservation Program staff of Arlington County is surveying Arlington Forest in Service Area C.

Each resource documented was architecturally defined, physically assessed, photographed with black-and-white film, and evaluated for its contribution to the historic context of Arlington County. The impressive number of historic properties within the targeted survey areas forced methodology based largely on historic maps and county needs. E.H.T. Tracerics, Inc. used the 1936 and 1954 *Sanborn Fire Insurance Maps* and the 1943 *Franklin*

Survey Maps to properly identify historic resources to be included in the survey. Properties within the Rosslyn-Ballston Corridor were comprehensively surveyed to the 1954 date of construction as documented by historic maps. Non-historic properties initially intended to be included within a historic district were surveyed.

One outcome of the reconnaissance survey is the recommendation for further survey work and nomination of properties to the Virginia Landmarks Register and the National Register of Historic Places. The Phase VIIA survey identified Fillmore Garden Apartments as a candidate for nomination to the National Register of Historic Places as a historic district within the context of the "Garden Apartments, Apartment Houses, and Apartment Complexes in Arlington County, Virginia: 1934-1954," which was prepared in 2002. Further, a study should be made of Columbia Heights, west of South Frederick Road. This section of Columbia Heights was historically known as Virginia Heights, a post-World War II subdivision of single-family dwellings, including a handful of the county's few surviving Lustron houses built in 1948. The neighborhood must be comprehensively surveyed and researched in depth to determine its eligibility and integrity. Virginia Heights is now considered a part of Columbia Forest but is not included in the historic district as it was not part of the original development funded and designed by the Defense Homes Corporation (DHC) and Army Corps of Engineers.

The reconnaissance level survey of Arlington County should be continued at all costs to ensure a comprehensive recordation of its historic properties and the context in which they developed. Within Neighborhood Service Areas A, B, and C the following communities need to be surveyed: Woodmont, Riverwood, Dover-Crystal, Donaldson Run, Bellevue Forest, Rivercrest, Arlingwood, Chain Bridge Forest, Gulf Branch, Old Glebe, Stafford-Albemarle-Glebe, Arlington-East Falls Church, Bluemont, Boulevard Manor, Dominion Hills, Highland Park/Overlee Knolls, Leeway Overlee, Madison Manor, Old Dominion, Rock Spring, Tara-Leeway, Westover, Williamsburg, and Yorktown.

ACKNOWLEDGMENTS

As in the previous phases, E.H.T. Tracerics, Inc. wishes to thank Michael Leventhal, Cynthia Liccese-Torres, and Anne Morrison at the Department of Community Planning, Housing and Development of Arlington County for their on-going commitment and support to this project. David A. Edwards of VDHR also deserve recognition and praise for assisting E.H.T. Tracerics, Inc. for a seventh year in meeting the needs of the County and the State. Additionally, Harry (Quatro) Hubbard and Trent Park of VDHR merit a great deal of thanks for their unending assistance. E.H.T. Tracerics, Inc. would also like to thank the Library of Virginia, VDHR Archives, Arlington County Public Library's Virginia Room, the many local community and neighborhood groups, and the Arlington County Historical Society.

A special word of gratitude is sent to the many residents of Arlington County, who allowed access to their homes and provided valuable information regarding the history of the county, neighborhood communities, and individual resources.

INTRODUCTION

Project Purpose and Goals

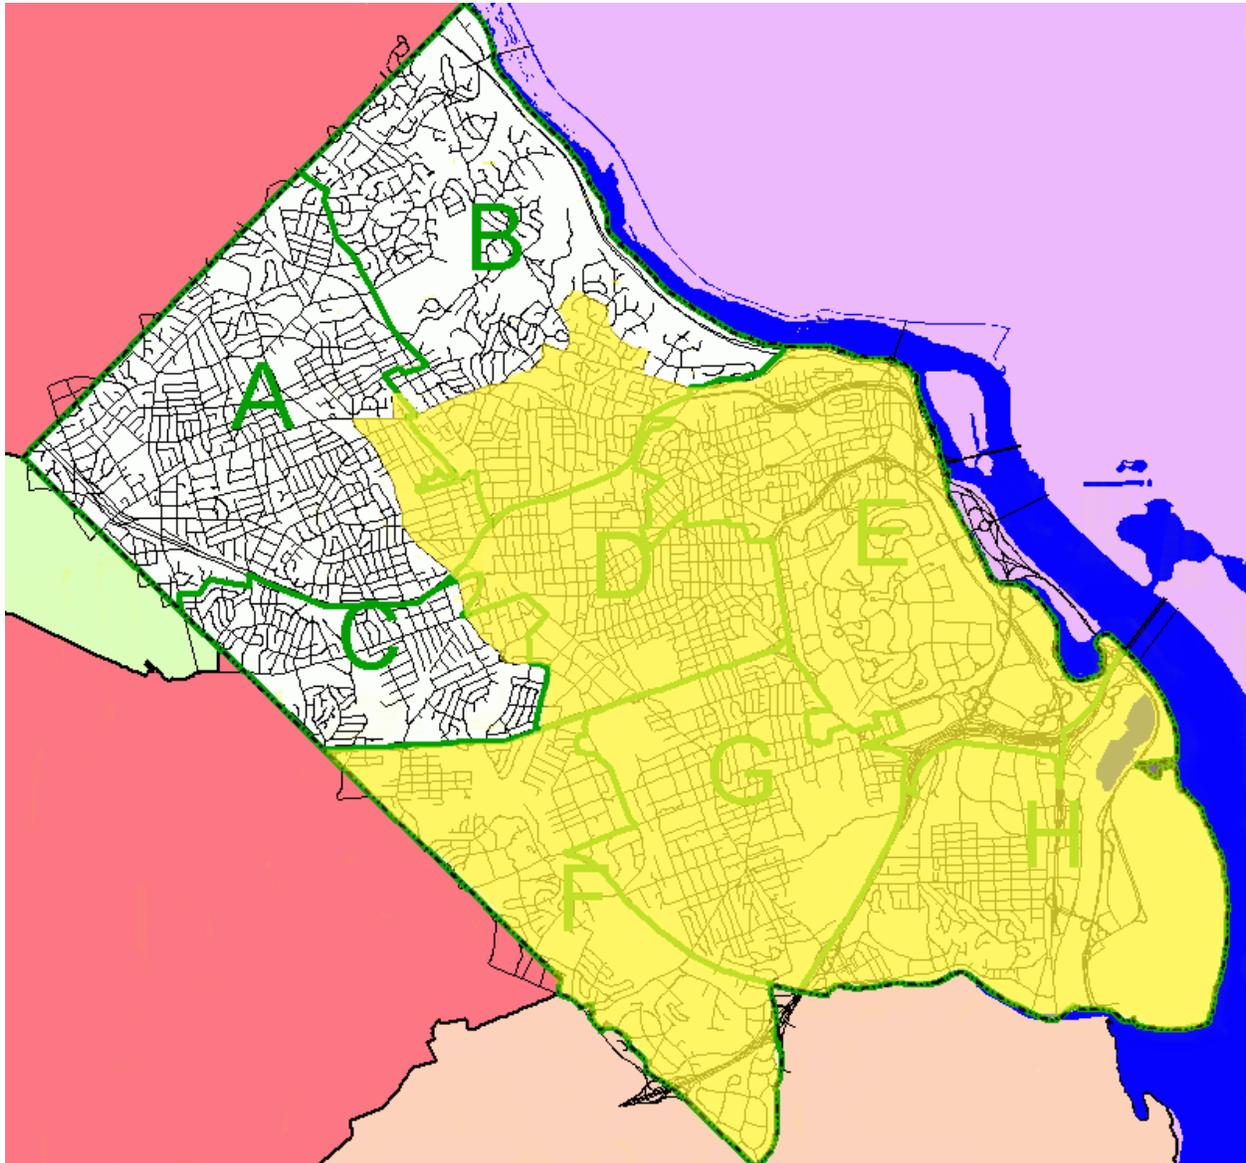

The Architectural Survey Report of Arlington County, Virginia is a multiple-phase project. The first six phases of the project were funded under the terms of the Virginia Department of Historic Resources' Cost-Share Program. Beginning in December 2002, Arlington County has contracted directly with E.H.T. Tracerics to complete the reconnaissance survey (Informal Solicitation No. 50-02-I) of Arlington County, Virginia. The work was to include the survey and documentation of approximately 550 properties, a detailed survey report, and recommendations regarding further study of any, or all, of the resources retaining significance and integrity within the historic context established in Phase I (1996).

Scope of Work

The project anticipated the survey of previously identified properties as well as those resources not previously identified that met the age guideline established for each neighborhood within the targeted survey area. The survey area was to include Neighborhood Service Area B, with the recordation of Waverly Hills and Woodmont. The scope of the project also included documentation of a portion of Columbia Forest and Fillmore Garden Apartments. Each resource was assessed, surveyed, documented, and photographed to the reconnaissance level on Virginia Department of Historic Resources field forms. This process allowed for a thorough study of each resource and its date of construction substantiated by historic maps and permit cards, building materials, architectural style, and use. All of the properties surveyed were entered into the Department of Historic Resources' Data Sharing Software (DSS) database. Utilizing DSS, a final survey report was produced that presented the finding of the first half of the seventh survey phase and allowed for a comparison of each of the resources identified in all seven of the survey and documentation phases. Within the established significance, each property and neighborhood was assessed for its contribution with recommendations for further study as a potential landmark or historic district.

Staffing

Funded by Arlington County, Phase VIIA of the Survey of Arlington County was contracted to E.H.T. Tracerics, Inc., an architectural history firm specializing in historic preservation. Laura V. Trieschmann served as Project Director/Senior Architectural Historian, responsible for overseeing the completion of the project, writing the final survey report, and conducting the final assessment of the resources. Architectural historian Jana E. Riggle oversaw the on-site fieldwork in the neighborhoods of Waverly Hills and Columbia Forest. Kristie Baynard served as project manager for the survey of Woodmont, the continued survey of Waverly Hills, and the final production of the survey products. Jennifer Hallock and Jerry Maready assisted with the survey work. The architectural historians were all responsible for the archival research and documentation conducted at local, state, and federal repositories, as well as contacting the community associations.

**SURVEY AREAS IN ARLINGTON COUNTY
PHASES I, II, III, IV, V, VI, AND VIIA**

HISTORIC THEMES

The Virginia Department of Historic Resources (VDHR) has developed eighteen historic themes that capture the context of Virginia's heritage from the earliest times. These themes are defined in the Survey Findings section of this report. Whenever possible, the documented resources were placed within the eighteen historic context themes established by VDHR to allow for a better understanding of the development impacts affecting the survey area. Three of the eighteen themes are discussed here as they pertain to the extant historic resources within the Phase VII survey area of Arlington County. The most prevalent theme is the Architecture/Community Planning theme, followed closely by the Domestic theme. Resources relating to the Commerce/Trade theme were also identified, although only minimally. The remaining themes – Landscape, Industry/Processing/Extraction, Education, Religion, Social, and Funerary Government/Law/Political, Transportation/Communication, Military/Defense, Health Care/Medicine, Settlement, Ethnicity/Immigration, Technology/Engineering, and Subsistence/Agriculture, and Recreation/Arts – were not identified.

As the survey efforts move northward in Arlington County, the number of themes identified has fluctuated. During Phase I, eleven of the eighteen themes were documented – Architecture/Community Planning, Domestic, Commerce/Trade, Religion, Funerary, Education, Social, Settlement Patterns, Recreation/Arts, Military/Defense, and Ethnicity/Immigrations. Phase II included fourteen of the eighteen themes – Architecture/Community Planning, Domestic, Commerce/Trade, Religion, Funerary, Education, Settlement Patterns, Government/Law/Political, Military/Defense, Recreation/Arts, Social, Subsistence/Agriculture, Transportation/Engineering, and Ethnicity/Immigration. Phase III identified resources relating to eight of the themes – Architecture/Community Planning, Domestic, Commerce/Trade, Education, Religion, Funerary, Settlement, and Social. The Phase IV survey recorded the same eight themes with the addition of the Industry/Processing/Extraction theme. The Phase V survey documented seven of the themes – Architecture/Community Planning, Domestic, Commerce/Trade, Education, Religion, Social, and Transportation/Communication themes. The same themes were identified during the Phase VI with the exception of Transportation/Communication. Rather, the Funerary theme was documented minimally.

The change in the number of themes documented during each survey phase may be attributed to the suburban context of central and northern Arlington County and the many residential communities that developed during the second quarter of the 20th century. Arlington County's close proximity to Washington, D.C., as well as its importance as an outlying component of the nation's capital, appears to have reduced the thematic diversity in the central region of the county. The loss of physical reminders of the county's past as a 19th-century rural community, and later, as a turn-of-the-20th-century streetcar suburb, tends to increase significance for properties related to minimally represented themes identified throughout the survey process. This is especially true for properties related to the Subsistence/Agriculture, Transportation/Communication, Commerce/Trade, Settlement Patterns, Religion, and Military/Defense themes. Although a few properties have been documented for their association with these themes, they tend

to be examples dating from the second and third quarters of the 20th century, thus indicating that pre-20th-century examples are significant as rare examples of any given property type. Upon completion of the entire survey effort, anticipated after Phase VIII, a more substantial analysis of the thematic diversity should be prepared.

THEME: ARCHITECTURE/COMMUNITY PLANNING

Architecture

The areas covered by the Phase VII survey of Arlington County experienced the greatest surge of development in the early to middle parts of the 20th century. The survey recorded a variety of different styles and forms of buildings. The majority of these buildings date from the second quarter of the 20th century, predominately 1930 to the early 1950s. Largely domestic, the buildings' styles range from Craftsman-style bungalows to Colonial Revival-style dwellings. The forms and styles include Tudor Revival, Colonial Revival, Dutch Colonial Revival, Bungalow/Craftsman, and Cape Cods. The Tudor Revival style was largely concentrated in the southern half of Waverly Hills, while the Colonial Revival style dominates the northern half of the neighborhood as well as Columbia Forest, Woodmont, and Fillmore Garden Apartments.

Notably, several styles identified during the Phase I survey were not recorded in the Phase II survey. These include the Prairie style, Shingle style, Late Victorian and Late 19th- and 20th-century Revivals, and the Federal style. This lack of stylistic diversity increased as the survey moved northward. Five architectural styles noted during the Phase II survey were not recorded in Phase III – Greek Revival, Italianate, Classical Revival, International, Art Deco, and Italian Renaissance. Unlike Phase III, the Phase IV survey noted examples of the Italianate, Moderne, Art Deco and International styles. The Phase V and Phase VI surveys documented many of the same architectural styles noted previously. Such styles as the Spanish Colonial Revival and Classical Revival, noted in previous surveys, were not recorded during the Phase VI survey. The Phase VIIA survey did not record the Queen Anne style for the first time since the documentation effort began. Rather, the 20th-century Colonial Revival and Tudor Revival styles dominated.

Colonial Revival Style

Gaining popularity as early as 1910, the Colonial Revival style was the most dominant architectural style documented during the Phase VII efforts, a trend noted in the Phase I, Phase IV, Phase V, and Phase VI surveys as well. The style was not confined within any one neighborhood; rather it was widespread throughout the survey area. Examples predominately were residential, including single-family and multiple dwellings.

Following the Centennial celebrations of 1876 in Philadelphia, the Colonial Revival style emerged as a contemporary architecture, fulfilling the nostalgia of the romanticized

Enlightenment values and the achievements of the era of the founding of the republic.¹ The style, which borrowed heavily from early American architecture, “quickly became the height of fashionable taste as the American public came to embrace rather deny its national past. The Colonial Revival style thereafter enjoyed ongoing appeal, becoming a mainstay of housing design in America from its origins about 1880 through the post-World War II era....² By the 1920s and 1930s, Colonial Revival was the “most important of the many revival styles that formed American’s huge new suburbs.”³ James C. Massey and Shirley Maxwell state in *House Styles in America* that “suburban streetscapes took on an increasingly sedate air. Blocks of unassuming Colonial Revival buildings filled pleasant neighborhoods where the houses seemed to share a comfortable family resemblance. Variety for the sake of variety had been replaced by a subtle and, to the millions of Americans who lived in such homes, deeply satisfying traditionalism.”⁴

Developers and architects quickly embraced the Colonial Revival style to meet the housing needs of suburban Arlington County in the middle part of the 20th century. The spreading of the style to the suburbs and the mass production of Colonial Revival architectural elements prompted the detailing and form to become more modest and plain to meet the housing and economic demands of prospective homeowners. Commonly found features of the style include accentuated main entry doors, symmetrically balanced facades, single and paired double-hung sash windows, and side gable or hipped roofs. The repetition of the form and detailing signifies the mass production of the buildings by a single developer, builder, and/or architect.

⁴ Massey and Maxwell, p. 186.

Figure 1: House, 4605 20th Street, North (000-8891)

The adaptation of the style to the middle-income housing in the Phase VIIA survey area of northern Arlington County resulted in three-bay-wide, rectangular brick structures with projecting porticos, cornice returns, open pediments, and Tuscan columns. The Colonial Revival-style dwellings tend to be slightly smaller in scale and plan than the other Colonial Revival-style buildings noted in southern and central sections of Arlington County during previous survey phases. Another notable distinction is the reduced stylistic ornamentation; a trend that reflected the mass production of domestic dwellings to meet the tremendous housing needs of the nation's capital in the 1930s and 1940s. Examples of Colonial Revival-style dwellings include 4606 16th Street North (000-9413-0062), 4428 18th Street North (000-9413-0200), 4603 19th Street North (000-9413-0254), and 4400 20th Road North (000-9413-0307). Other examples identified in the survey include 4508 20th Street North (000-8884), 4513 20th Street North (000-8889), and 4605 20th Street North (000-8891), which have central entries flanked by single window openings. The last two examples have front-gabled dormers, which are fully clad in aluminum siding and set directly over the second-story window openings so that they read as wall dormers.

Figure 2: House, 2384 North Quincy Street (000-9003)

As the survey moves further north, however, the Colonial Revival-style buildings are increasing in scale and ornamentation, often placed on larger suburban lots to meet the demands of the upper-middle class moving into Arlington in the 1940s and 1950s. This was particularly noted in a section of Woodmont that was historically known as Crystal Springs Knolls. More applied Colonial Revival-style ornamentation is used, including oversized cornice molding, splayed jack-arched brick lintels, and a steeply pitched front-gabled portico. The masonry dwelling at 2384 North Quincy Street (000-9003) in Woodmont is an excellent example of the ornamentation of the modest Colonial Revival-style suburban form. Constructed in 1940 by builder D.S. Boger, the two-and-a-half-story house is clad with six-course Flemish bond brick and capped by a steeply pitched side-gabled roof that is pierced by tall interior end brick chimneys with corbeled caps. The large first-story window openings, which hold 8/8 wood sash, are framed by splayed jack-arched brick lintels and operable louvered shutters. The cornice is ornamented with an oversized molding that is suggestive of dentils or modillions. A steeply pitched front-gabled portico shelters the narrow central entry. It is supported by thick Tuscan-like posts and finished with a raised triangular panel at the center of the tympanum.

Figure 3: House, 4001 24th Road, North (000-8986)

The more high-style interpretations of the Colonial Revival were also noted in Woodmont, such as the Colonial-inspired house at 4001 24th Road North (000-8986). Constructed by builder Charles W. Brawner for Jack Sronce in 1940, this one-and-a-half-story dwelling is illustrative of the resurrection of Colonial Williamsburg in the second quarter of the 20th century. As recounted by William Seale in *Stratford Hall and Other Architectural Studies*, Williamsburg underwent two major periods of growth between the Great Depression and the 1950s that greatly impacted the study of American architecture and construction.⁵ Architects and builders often copied the style, plans, forms, and scale of the restored 18th century-buildings of Williamsburg, many times using historic materials to authenticate the presentation. The Colonial Revival-style house on 24th Road North is constructed of brick laid in six-course American bond and covered by a steeply pitched side-gabled roof clad in slate shingles. A large, double-shouldered exterior chimney with a wide corbeled cap dominates the north elevation of the building. The façade is marked by a single-leaf, central entry with square-edged wood surrounds with back banding, a narrow five-light transom, and a splayed jack-arched lintel of brick. The elongated window openings have 9/9 double-hung, wood sashes with rowlock brick sills and splayed jack-arched brick lintels. Narrow front-gabled dormers with 6/6 double-hung, wood sashes pierce the roof, which is trimmed by a plain boxed cornice. A one-story wing obscures the northern end of the façade. It has narrow six-light casement windows set to either side of a double-shouldered exterior brick chimney. The plan, elongated window openings, narrow transom, dormers, double-shouldered exterior brick chimneys, and masonry construction are particularly indicative of the architecture being heralded by researchers, scholars, preservations, and architects at Colonial Williamsburg during the period the house at 4001 24th Road North was constructed.

⁵ William Seale, "Paul Buchanan and Architectural History," *Stratford Hall and Other Architectural Studies*, by Paul Buchanan, (Stratford, VA: Robert E. Lee Memorial Association, Inc., 1998), pp. 1-3.

The Dutch Colonial Revival style, distinguished by a gambrel roof, is a variation of the Colonial Revival style. Constructed in 1930, the historic Dutch Colonial Revival-style dwelling at 4404 19th Street North (000-9413-0244) is an excellent example. The two-story building, extending four bays wide, is a masonry structure clad in six-course American bond brick. The gambrel roof is clad with asphalt shingles, complete with wide overhanging eaves and a shed-roof dormer. Another example, erected in 1951, was noted at 4006 24th Road North (000-8988) in Woodmont.

The Colonial Revival style was the preferred architectural fashion for garden apartments in the 1930s and 1940s in Arlington County. The design, form, and landscaping plan of many of the garden-apartment complexes was often dictated by the Federal Housing Administration's (FHA) minimum requirements for new subdivisions and its highly influential standards. Although the requirements and standards did not specifically state an architectural style of choice, the FHA clearly preferred the nostalgia of the Colonial Revival style. Accordingly, Colonial Revival became the stylistic prototype for almost all Washington, D.C. area garden apartments during the 1930s and 1940s.⁶

The Colonial Revival style is overwhelming illustrated at Fillmore Garden Apartments (000-9026 through 000-9045) along South Walter Reed Drive. The repetition of building materials and common decorative elements, standard floor plans, and consistent low-rise scale helps give the Fillmore Garden Apartments the orderly and unified appearance characteristic of the Colonial Revival style. The two- and three-story buildings are constructed of brick accented with limestone. The buildings are detailed with limestone stringcourses, oculi windows, brick quoins, and parapet roofs. Colonial Revival-style surrounds of wood ornately frame the entry openings. The different types of casings include fluted pilasters supporting flat-arched lintels, pedimented lintels, and broken swan-neck or ogee pediments with ball finials. Several of the buildings along South Walter Reed Drive have exterior-end, paired brick chimneys and those buildings along the eastern part of the complex, fronting the parking lot, have large incinerator chimneys. Three types of roof forms – flat with built-up asphalt roofing surrounded by a brick parapet along with hipped and side-gabled roofs with either slate or asphalt shingles – provide variety to the design.

The most high-style detailing at Fillmore Garden Apartments ornaments the larger buildings along South Walter Reed Drive, which is a major transportation corridor through the county. These multiple dwellings are finished with flat-roof porticos with ornate balustrades, paired columns or posts, and semi-circular arched openings with keystones. The hipped roof of the building at 811-815 South Walter Reed Drive (000-9040) is topped by a bell-shaped cupola with a metal weathervane. The cupola is pierced by semi-circular arched openings with louvered wood vents. Similarly, the imposing dwelling at 615-631 South Walter Reed Drive (000-9044) has a tall pyramidal cupola set on a square base. Pierced by semi-circular arched openings with louvered wood vents, the cupola is edged by a balustrade. The first story of this building, which is reminiscent

⁶ James Goode, *Best Addresses: A Century of Washington's Distinguished Apartment Houses*, (Washington, D.C.: Smithsonian Press, 1988), p. 335.

of the Governor's Palace at Colonial Williamsburg, has a colonnade with semi-circular arched openings that access the central courtyard of the apartment complex.

Figure 4: Fillmore Garden Apartments, 811-815 Walter Reed Drive (000-9040)

Another example of the Colonial Revival style ornamenting garden apartments is Parkland Gardens (000-8967, 000-8968, and 000-8969), located along North Glebe Road and North 20th Road in Waverly Hills. Constructed in 1943, the buildings are set around a landscape courtyard and have been designed to take advantage of the sloping terrain in this section of Waverly Hills. The brick buildings stand two stories in height, some with raised English basements. Limestone stringcourses wrap around each of the buildings, which are ornately finished with broken and pedimented lintels and flat-arched surrounds. Limestone jack-arched lintels cap the single and paired double-hung replacement windows. Parapet walls edge the flat roofs, while the side-gable roofs, which are sheathed in slate, have stepped end parapet walls.

A more modest example of the Colonial Revival style's influence on garden apartment design was documented at Vermont Terrace (000-8976 and 000-8977). Built in 1952-1953, the three-story brick buildings are largely devoid of ornamentation, with the exception of the brick quoins, octagonal window openings, and window surrounds. Low parapet walls edge the flat roofs. The single and paired window openings have 6/6 replacement double-hung sash and the double-leaf openings hold commercial-style glass and metal doors.

Tudor Revival Style

The Tudor Revival style is one of the most popular architectural styles noted throughout Arlington County. The style is loosely based on architectural characteristics of late Medieval English cottages and manor houses featuring Renaissance detailing. The first Tudor Revival-style dwellings appeared in the United States in the late 19th century and were designed by architects who closely copied English models. These dwellings featured stone or brick walls, steeply-pitched parapet cross-gabled roofs, elaborate facades of Gothic or Jacobean inspiration, tall narrow windows arranged in groups with multi-pane glazing, and large chimneys topped with decorative pots. From 1900 to 1920, the style began to appear on more modest dwellings. These dwellings retained the steeply pitched roof, groups of narrow windows, and dominant chimneys and began to exhibit half-timbering as a decorative detail. The style reached its height of popularity during the late 1920s and the 1930s, but continued to be popular in suburban neighborhoods nationwide until the middle part of the 20th century. The rise in the style's popularity corresponded to developments in masonry veneering techniques, which allowed modest dwellings to mimic the brick and stone exteriors seen on the earlier high-style interpretations of the style. These dwellings demonstrate a wide variation of shape, form, and exterior decorations; however, the markers of the style are still apparent in the steeply pitched, cross-gabled roofs, dominant chimneys, and exterior decorations such as half-timbering, skintled bricks, and decorative stone work. Examples of these interpretations of the Tudor Revival style are found throughout Waverly Hills, particularly in the southern section of the neighborhood. Examples include the dwellings at 4501 17th Street North (000-9413-0177), 4511 17th Street North (000-9413-0176), 4504 18th Street North (000-9413-0205), and 1611 North Glebe Road (000-9413-0110).

Figure 5: House, 2370 North Oakland Street (000-9019)

The Tudor Revival-style house at 2370 North Oakland Street (000-9019) in Woodmont, which was known as Crystal Springs Knolls at the time of development, is more modest in ornamentation in comparison to the Tudor Revival-style buildings in Waverly Hills. Constructed in 1940 by builder William L. Redditt for M. Andrew Bohnert, this dwelling

is a pure example of the Tudor Revival style in plan and form. It stands one-and-a-half stories high, is asymmetrically three bays wide, and is clad in asbestos shingles. A projecting bay on the façade enhances the rectangular form of the structure, which is covered by a side-gabled roof. This projecting bay, pierced by a single entry and paired windows, has a distinctive slope on the eastern side of its front-gabled roof. The sloping roof draws the viewers' attention to the massive, skintled, exterior chimney that dominates the façade of the dwelling.

Bungalow/Craftsman Style

A handful of Craftsman-style bungalows can also be found in the first three subdivisions making up the Waverly Hills Historic District. Between 1929 and 1936, when much of these subdivisions were being developed, traditional domestic forms were often interpreted for economy and convenience. The resulting bungalow mimicked the plan and massing traditionally associated with the fashionable Queen Anne style; yet, the bungalow form was invariably one to one-and-a-half stories in height. The bungalow is generally covered by a low-pitched, intersecting gable roof that encompassed the often-wrapping porch. The modest arrangement of the wood-frame buildings made them one of the most popular low- to middle-income domestic forms in growing suburban communities like Waverly Hills across the United States. The bungalow was very often adorned with elements of the Craftsman style. Craftsman stylistic elements displayed in the district include rock-faced concrete block foundations, battered wood Tuscan posts, full-width front porches, overhanging eaves, and wood knee brackets. Examples of Craftsman-style bungalows are located at 4440 16th Street North (000-9413-0102), 4507 16th Street North (000-9413-0130), and 4602 17th Street North (000-9413-0119).

Modern Movement

Influenced by the Art Deco, Streamline Moderne, and International styles, the buildings designed in the Modern Movement were minimal in their applied ornamentation and utilized contemporary building materials. Typically, the stylistic ornamentation was presented by the materials and forms, such as glass blocks, metal window frames, and small casement windows flanking larger picture windows. The buildings along 20th Place North, for example, are larger in form than the traditional Cape Cod structures, although they maintain the one-and-a-half-story height. The wide square form of the wood-frame structures are capped by steeply pitched side-gabled roofs with shallow overhanging eaves. These dwellings are predominately located in Berkley's Addition to Waverly Hills and were constructed by the Atlantic States Construction Company in 1950. The symmetry of the traditional Cape Cod is broken by the large picture window, which is set off center on the façade, and flanked by a single-leaf entry and narrow casement windows that wrap around the corner of the structure. Several of the examples have front-gabled dormers and overhanging pediments that shelter the main entry. The narrow casement windows are set just below the cornice line and illuminate the more private spaces such as a bedroom. The larger picture windows, originally with fixed metal frames, provide more nature light for public spaces like the living room. A number of the original multi-light picture windows have been replaced with single-light windows, bowed windows,

vinyl windows, casement windows, and crank windows. Examples were noted along North Woodstock Street and North Vernon Street, including 2015 North Woodstock Street (000-8895), 2019 North Woodstock Street (000-8896), 2023 North Woodstock Street (000-8897), 2055 North Vernon Street (000-8900), 2058 North Vernon Street (000-8899), and 2062 North Vernon Street (000-8898).

Figure 6: House, 2062 North Vernon Street (000-8898)

The structures illustrative of the Modern Movement were often constructed of masonry with stretcher-bond brick facing. Wall planes and surrounds were composed of contrasting masonry materials such as colored bricks or formed stone. The use of varying colored bricks was noted along Woodrow Street North in Waverly Hills. Constructed by the Courembis Construction Company in 1950, these two ranch houses are clad in red brick. Alternating rows of blonde and red bricks provide ornamentation to the upper stories of the façades at 1927 Woodrow Street North (000-8944) and 1943 Woodrow Street North (000-8940) for example. Other examples in the neighborhood are clad in blonde brick, with red, white, or yellow bricks as the ornamenting feature, such as 1915 North Woodrow Street (000-8947).

Figure 7: House, 1915 North Woodrow Street (000-8947)

Figure 8: House, 1927 North Woodrow Street (000-8944)

Other Styles Recorded

The building types that did not reflect a particular style were designated as "Other." This designation was used a number of times in the survey area and largely included domestic dwellings that were one-and-a-half stories in height and most of the associated historic outbuildings identified. As noted in previous surveys of Arlington County, the most prevalent form was the L-shaped dwelling with a cut-away front porch. Generally without ornamentation, this building type was constructed during the housing boom of the World War I to World War II Period and the New Dominion Period. The lack of detailing on many of the houses, apartments, and commercial buildings countywide allowed for quick inexpensive construction using readily available materials. Additionally, many of the domestic examples, and several of the commercial buildings, did not conform to any style because the original structure had been severely altered, losing or obscuring the original forms and details.

Community Planning

Waverly Hills

The neighborhood of Waverly Hills is an excellent example of the many residential subdivisions that emerged in Arlington County after the First World War to support the burgeoning population flocking to the nation's capital and its suburbs. The location of the neighborhood, lying between the Washington and Old Dominion Railroad, which provided easy access to and from Washington, D.C., and North Glebe Road, a historically important route, made the neighborhood an ideal location for a subdivision. The earliest portion of Waverly Hills to be developed was platted as Willette Heights in 1919.¹ This neighborhood featured large rectangular lots, streets laid out on a grid pattern, and alleys running behind each of the lots. Throughout the 1920s and 1930s additional land to the north and south of Willette Heights was subdivided and added to the neighborhood. The name of the subdivision was changed to Waverly Hills at some point during the 1920s for unknown reasons. The chronological development of the current Waverly Hills district is documented by its architecture, which includes a range of construction dates including the circa 1850 Glebe House, and the subdivision dwellings dating from 1930 up to the infill construction of the latter part of the twentieth century. Varying from large two-and-a-half-story dwellings to smaller one-story dwellings, the neighborhood is generally defined by its collection of Tudor Revival, Craftsman, and Colonial Revival-style residences. The architecture, as represented in Waverly Hills, reflects the suburbanization of the popular styles rather than the initial high-style expression. As a whole, the early-20th-century suburb of Waverly Hills achieved significance as a planned residential community developed between 1919 and 1945. Furthermore, the residences throughout Waverly Hills document the development of Arlington during the second quarter of the twentieth century, a time when Arlington was undergoing a permanent change from a rural community to a commuting suburb of Washington, D.C.

Waverly Hills is also home to the dwelling commonly known as the Glebe House, built circa 1850 as a replacement building. This brick dwelling features a large-scale octagonal wing, one of the few surviving examples of the form, promoted by Orson Squire Fowler during the middle of the 19th century, within the Commonwealth of Virginia. The current structure at 4527 17th Street North is believed to date to circa 1850. The original Glebe House was built circa 1775 to serve as a home for the rector of the newly created Fairfax Parish operating under the direction of the Church of England. The dwelling was sited on 517 acres created to provide a living for the rector. Historical records indicate that the original dwelling burned in 1795 and soon thereafter the land was sold to Walter Jones and John Mason. Jones built a new dwelling on the Glebe lands in 1820, which only survived until 1840 when the dwelling was once again consumed by fire. John Brown, who owned the property in the 1850s, rebuilt the dwelling again and added a two-story octagonal wing. The brick, two-story octagonal wing was built onto the southwest corner of the dwelling. A third addition, consisting of a one-story kitchen wing, was constructed in the early 20th century. The Glebe House currently houses the National Genealogical Society and was listed individually on the National Register of Historic Places in 1972.

THEME: COMMERCE/TRADE

RESOURCE TYPES: Specialty Stores; Neighborhood Shopping Centers

With improvements in transportation, the county was opened to development, particularly commercial enterprises that flanked the major thoroughfares, such as Lee Highway and Columbia Pike. Purpose-built commercial buildings dominate these major transportation corridors, which ran through the county. These modern commercial developments provide services to the neighborhood and passing automobile traffic, often providing off-street parking. The commercial buildings, which have experienced alterations and additions to meet the needs of the changing clientele and occupants, generally are one to two stories in height with an irregular plan. Many of the masonry structures have flat roofs with parapets, large show windows, and ornamentation presented by the varying of building materials. Typically, the commercial buildings were freestanding structures that provided space for a single store, although a row of commercial stores was noted at 4500-4540 Lee Highway. The five commercial properties encompassing six buildings were documented as part of the Phase VII survey: 3100-3140 Lee Highway (000-9025), 2301 Columbia Pike (000-9046), 4736 Lee Highway (000-8980), 4500-4540 Lee Highway (000-8981), and 4624 Lee Highway (000-8973).

Originally known as Moskey's Drug Store, the commercial building at 4736 Lee Highway was constructed in 1936 for Thomas A. Moskey. The masonry structure, originally one story in height, stands two stories high with a flat roof. Elements of the modern movement illustrated in the design of this building, which was renovated and converted into a bank in 1965, include the horizontal massing, large plate glass windows with metal frames, and the flat roof supported by pilotis along the first story on North Glebe Road. The corner of the building at the intersection of North Glebe Road and Lee Highway is rounded with no applied ornamentation.

One of the most recognizable commercial buildings in the Washington Metropolitan Area is the Little Tavern. Now altered, the Little Tavern at 3140 Lee Highway was constructed about 1940. The Little Tavern, designed by company designer George E.V. Stone, is easily recognizable, with its steeply pitched side gable roof, shed roof dormer, hooded entry, and its characteristic green and brown accents. The Luther Reason Ray's Structural Porcelain Enamel Company produced the cladding materials that became synonymous with the Little Tavern. A secondary structure, extending perpendicular to the roofline of the body of the restaurant, provided additional seating and mechanical space behind the restaurant. Unlike the main block of the restaurant, the form of the rear structure was not duplicated exactly at each location. It did, however, retain the image of Little Tavern through materials, including the white metal panels and green and brown accents. No longer used as a Little Tavern Restaurant, the building on Lee Highway was recently altered and clad in dryvit; therefore it does not retain any of its recognizable corporate features. The Little Tavern abuts a two-story brick building at 3100 Lee Highway that houses National Pawnbrokers. This commercial building is located at the intersection of Lee Highway and Sprout Run Parkway. Because of its corner location between the neighborhoods of Cherrydale and Lyon Village on a major transportation

artery, the northeastern corner of the Moderne-style building is rounded to attract the eye of passing motorists.

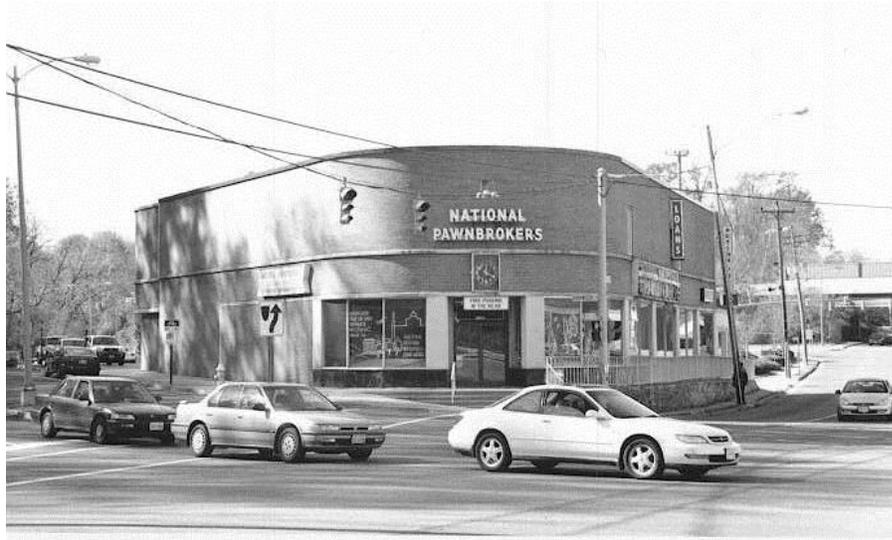

Figure 9: National Pawnbrokers, 3100 Lee Highway (000-9025)

In the decade prior to World War II, Washington, D.C. and the surrounding areas experienced tremendous population growth related to the increase in federal government bureaucracy stemming from Roosevelt's New Deal programs and, by the end of the 1930s, defense activities in preparation for war. Residential and related commercial construction increased correspondingly during the period, particularly in suburban areas of Washington, D.C., including the northwest Connecticut Avenue corridor, Montgomery County, Maryland, and Alexandria City and Arlington County, Virginia. In this environment of rapid population and building expansion, a new commercial building type, the neighborhood shopping center, was introduced and became a prominent feature in the suburban landscape. The Lee Heights Shopping Center at 4500-4540 Lee Highway in Waverly Hills is an excellent example of the neighborhood shopping center.

The neighborhood shopping center initially developed to accommodate the basic retail and service needs of individuals living in newly developed suburban residential areas that were distant from the traditional urban core where commercial establishments were numerous and readily accessible. Unlike the highly individualized, independently-conceived commercial establishments of the city, suburban shopping centers built prior to World War II generally consisted of seven to twenty commercial tenants integrated into a single building with centralized management.⁷ Antecedents to the neighborhood shopping center occur as early as the late 19th century in planned suburban residential

⁷ An in-depth examination of the early development and characteristics of the neighborhood shopping center can be found in Richard Longstreth, "The Neighborhood Shopping Center in Washington, D.C., 1930-1941," *Journal of the Society of Architectural Historians* 51, no. 1 (March 1992), pp. 5-35.

developments for the wealthy.⁸ The first true neighborhood shopping center to be constructed in the Washington, D.C. area was the Park and Shop, designed by Arthur B. Heaton and built in 1930 for the Parking Stores, Inc. development company. Located at 3507-3523 Connecticut Avenue, N.W., the shopping center served the rapidly growing Connecticut Avenue corridor along which a number of high-rise apartment building had been constructed during the 1920s. The novel shopping center served as the model for subsequent pre-World War II neighborhood shopping centers.⁹ In the next eleven years, over twenty-five similar centers were constructed in suburban areas of Washington, D.C., with the period from 1939 to 1941 being the most active.¹⁰ By the beginning of World War II, the Washington, D.C. area boasted the highest concentration of neighborhood shopping centers in the country.¹¹

At least eleven neighborhood shopping centers were constructed in Arlington County before World War II, a statistic reflecting the rapid growth of the county during the period.¹² Between 1930 and 1940, the population of Arlington County grew 145% from 23,278 to 57, 040, with 41% of the work force in 1940 employed in public service of some kind, primarily in Washington, D.C.¹³ The largely middle-class character of Arlington County in the 1930s and high number of commuters created an ideal environment for neighborhood shopping centers, which were built either as independent commercial ventures adjacent to residential developments as in the case of Glebe Center (1940, 71-89 North Glebe Road) or as an integral part of a planned residential community as in the case of the neighboring Buckingham Shopping Center (1939, 235-256 North Glebe Road).¹⁴

Due to the almost total dependency of suburban development on the automobile, neighborhood shopping centers were located along major arteries, frequently at corners, not only to maximize visibility, but also to serve as a buffer between adjacent residential areas and the noisy roadways. By 1941, there was a neighborhood shopping center on virtually every major artery in Arlington County including four on North Glebe Road, three on Columbia Pike, and two on Wilson Boulevard.¹⁵ The automobile was a central element in the design of the neighborhood shopping center, as well. Parking was of paramount importance and was generally accommodated by a parking forecourt that occupied a large percentage of the commercial lot with one or several rows of diagonal spaces. Most shopping centers were one story in height with units arranged contiguous to one another, each with store frontage overlooking the parking lot and an entrance

accessed directly from it.¹⁶ The signage on neighborhood shopping centers was minimal, allowing for the building to service as the principal advertisement.¹⁷

Figure 10: Lee Heights Shops, 4500-4540 Lee Highway (000-8981)

Lee Heights Shopping Center at 4500-4540 Lee Highway was constructed in 1946 as the Woodstock Street Shopping Center in Waverly Hills. Providing diagonal parking at the front and a rear parking lot, the shopping center is one story in height and thirty bays wide with fourteen storefronts. The Office of Planning assessed the property in 1960 as part of the shopping center study. At the time of this county survey, the shopping center contained a drug store, music story, barber, launderette, dress shop, jewelry shop, clothing story, beauty parlor, cleaners, florist, and realty company. Large overhanging awnings extend downward from the roofline to the top of the show windows. These canvas awnings, obscuring the upper portion of the structure, serve as the principal advertisement, attracting local residents and passing commuters.

The one-story, commercial building at 2301 Columbia Pike was erected in 1952 near the Penrose neighborhood. The freestanding grocery store features masonry construction, a flat roof with metal mansard at the façade, and a rectangular footprint. The façade is eight bays wide and features a projecting one-story, metal porte-cochere. Other notable details include three-course rowlock beltcourse under the overhanging eaves, concrete coping, brick piers between window openings, plate glass windows with stone veneer spandrels, and the projecting glass entry vestibule with two-light transom and plate glass door. The building is exemplary of commercial buildings constructed at the middle part of the 20th century to serve the growing residential neighborhoods of Arlington County. Similar commercial buildings, many serving as grocery stores, restaurants, dry cleaners, and specialty shops, surround the masonry store, which has a large parking forecourt to accommodate the commuter traffic along Columbia Pike.

¹⁷ Longstreth, p. 12.

THEME: DOMESTIC

RESOURCE TYPES: Single-Family Dwellings, Multiple-Family Dwellings, and Secondary Domestic Structures

During this phase of the architectural survey of Arlington County, the vast majority of primary resources have a historic association with the Domestic theme. The resource types identified in the survey area include single-family dwellings, multiple-family dwellings, and associated outbuildings, such as sheds, carports, playhouses, and garages. Noted during the previous survey phases, intense development of domestic buildings began in the Reconstruction and Growth period (1865-1917), and extended well into the World War I to World War II period (1918-1945). The greatest period of residential growth within the survey area occurred between 1930 and 1954. The expansion of residential neighborhoods within this area of Arlington County continued well into the 1940s, eventually subsiding in the late 1950s as outlying suburbs were established. Within the last two decades of the 20th century, however, the construction of residential housing has commenced again within the survey area with the erection of infill housing, townhouses, and high-rise apartment buildings.

One dwelling dating from the Colony to Nation Period (1750-1789) was identified during Phase I, while the oldest residential buildings identified during Phase II were constructed during the Antebellum Period (1830-1860). During Phases III and IV, the oldest residential buildings date from the Reconstruction and Growth Period (1865-1917). A single domestic building dating from the Early National Period (1790-1830) was documented in the Phase V survey, in addition to two Civil War era dwellings. Yet, as noted in the second and fourth phases of survey as well, the majority of the dwellings recorded during the fifth survey phase were constructed between 1930-1939. This period of development is ten years later than the average date identified during Phases I and III. Similarly, the greatest period of development in the area surveyed during Phase IV begins in the 1930s. This intense development, documented in Phases VI and VII as well, extended well into the 1940s and 1950s. The residential buildings surveyed in Phases I, III, IV, V, VI, and VII were predominately equipped with exterior end brick chimneys, rather than the interior brick chimney, which dominated the Phase II survey area. The plan, form, and massing of the dwellings, however, were consistent between all survey phases.

The chronological development of Arlington County, moving south to north, appears to represent its status as a streetcar suburb of Washington, D.C., which prompted rapid growth in the surrounding communities by the second quarter of the 20th century. As a result of this suburban development, farms were often subdivided to provide buildable lots for a substantial number of single- and multiple-family dwellings. Typically, the original dwellings that stood on the property during its tenure as agricultural land were razed in favor of modern housing.

Although more single-family dwellings were identified, a notable number of the domestic resources recorded represent multiple-family housing. Introduced in Arlington County in the 1920s, the multiple-family dwellings reached their culmination in the survey area

during the World War I to World War II Period (1918-1945) and New Dominion Period (1946-present). The variety of forms commonly associated with the multiple-family building type includes low-rise garden apartments, mid- to high-rise apartment buildings, and planned apartment complexes. Between the years 1920 and 1945, the apartment buildings within the boundaries of the survey area ranged from two to four stories in height. By the middle part of the 20th century, the structures began to reach to six stories, and eventually peaked at nine stories. The height of the multiple-family building noted in Phase VIIA survey area followed the low-rise garden apartment type, rising two to three stories in height.

The single-family resources in the Phase VIIA survey area are typically one-and-a-half stories to two-and-a-half stories in height, constructed on solid brick or concrete-block foundations. Equal numbers of wood-frame and masonry structures were surveyed, with a distinct increase in the use of masonry construction and brick cladding as the survey progressed northward.

When comparing all domestic resource types identified during Phase VIIA, it was noted that the roofs are primarily side gable, and typically clad in asphalt shingles. The dormers recorded were predominately front gable with little applied ornamentation, and often have been reclad in aluminum siding. The chimneys, mostly constructed of brick, are predominately exterior, projecting from the front and side elevations. The more modest dwellings in the survey area are three to five bays wide with a central entry; however, a significant number of side-passage dwellings were documented. The vast majority of the dwellings have one-story porches or porticoes on the facades. Although the double-hung window was overwhelmingly prominent throughout the survey area, casement and fixed windows were documented. The majority of the window openings were framed in wood, although a substantial number of original metal sashes were noted. The architectural styles in the survey area range from Craftsman-style Bungalow to the Modern Movement of the mid-20th century. The dominant domestic style is the Colonial Revival, which was the most prevalent architectural style noted during Phases I, II, IV, V, and VI. The Bungalow/Craftsman was noted more often during Phase III. This latter style and building form was minimally documented during the Phase VIIA survey. Additionally, the number of Tudor Revival and Modern Movement dwellings increased dramatically for the first time since the survey began.

Typically, the majority of suburban domestic buildings have associated outbuildings. Since most suburbs throughout the nation developed after 1900 were predicated on the use of automobiles, garages were an essential feature. Although, as the automobile became an essential tool, the freestanding garage was lost in favor of the attached garage, which often dominated the facades of residential buildings. Unlike the garages, the sheds in the survey area appear to be extremely unassuming and of a prefabricated nature. The utilitarian function of the buildings dictated the one-story, front-gabled form of the wood frame sheds.

World War I to World War II Period (1918-1945)

Between 1918 and 1945, the greatest phase of development began in the survey area. Although the number of single-family dwellings remained relatively constant when compared to previous survey phases, the number of multiple dwellings increased. Typically, the domestic buildings of this period are one to two-and-a-half stories in height with one- and three-bay-wide front porches. The plan of the dwellings usually has a central passage and is two rooms deep. Rooflines are overwhelmingly side gable and clad in asphalt shingles. Continuing the architectural styles and plans of the previous period, the domestic buildings of the World War I to World War II period are primarily designed in the Colonial Revival style. The Bungalow/Craftsman form dominated southern and central Arlington County, particularly in the early part of the period. By 1930, however, it was substituted by the rectangular box-like form of the Colonial Revival style in the northern part of the county. The Cape Cod was also a popular building form in the 1930s and 1940s, although the number of modest examples diminished as the survey moved northward into Woodmont.

Figure 11: House, 4005 24th Road, North (000-8985)

The increasing need for mass-produced housing at a low cost led to the reinvention of the “Cape Cod” form, popular during the 18th century. The form is one to one-and-a-half stories in height with a side-gable roof and a single end chimney. Unlike its ancestor, the 20th-century Cape Cod house was pierced with dormers that allowed the upper story to be more fully utilized. The façades were commonly marked with entry porticoes or porches. Rear additions and projecting bays on the façade augmented the Cape Cod. The stylistic detailing of the Cape Cod forms generally followed the Colonial Revival style, although elements characteristic of the Tudor Revival style were noted. The most popular form found throughout the survey area, the Cape Cod buildings are typically three bays wide, two bays deep, and have a central-passage plan. Detailing includes the flat door surrounds with shallow Tuscan pilasters supporting a slightly projecting entablature, a

corbeled brick cornice across the facade, and rectangular 6/6 double-hung, wood sash windows with brick sills. The larger lots in the northern part of the county often visually overwhelmed the modest form of the Cape Cod, which was typically enlarged by side and rear additions that did not diminish the scale or form of the main block. Yet, despite the enlarged form, the interior plan and design of the main structure remained pure to the traditional Cape Cod template. Examples of Cape Cod dwellings are located at 4611 15th Street North (000-9413-0054), 4424 17th Street North (000-9413-0148), 4427 18th Street North (000-9413-0237), 4519 19th Street North (000-9413-0258), and 4005 24th Road North (000-8985).

The most common form of single-family dwellings in Arlington County is the rectangular, box-like structure, typically extending three to five bays wide and standing two-and-a-half stories in height. The houses, overwhelmingly Colonial Revival in style, are often augmented by a one- to two-story side wing, which sometimes houses the garage or a sun porch. The scale and plan of the buildings noted increased as the survey moved northward with more and larger window openings, rear ells, and massive interior end chimneys on both side elevations. On the interior, the formal and informal living spaces were larger and distinctly separate, and additional rooms were provided including family rooms, bedrooms and baths.

Figure 12: House, 3835 Lorcom Lane (000-8993)

The two-and-a-half-story dwelling at 3835 Lorcom Lane (000-8993) in Woodmont is a good example of the rectangular, box-like structure commonly found throughout the county. Larger than those surveyed in the southern or central portions of Arlington, the house is three bays wide with a one-story side wing that includes a below-grade garage. Joel T. Broyhill constructed the dwelling and many of the neighboring buildings in 1941 for the development firm of M.T. Broyhill Company, Inc. The wide window openings have 8/8 double-hung, wood sashes framed by rowlock brick sills and operable louvered shutters. The recessed central entry, ornamented with panels, Tuscan pilasters, and a flat

molded lintel, suggests the interior provides a central hall flanked by the more formal living and dining rooms with access to the kitchen and less formal spaces at the rear of the dwelling. Similarly, the below-grade garage is presumed to have interior access to the basement and family room. Other examples were noted at 3841 Lorcom Lane (000-8992), 2355 North Quincy Street (000-9010), and 3827 Lorcom Lane (000-9011).

The construction of garden apartments in the Washington, D.C. metropolitan area reached a peak in the mid-1930s and early 1940s. In Arlington County, local officials and the federal government wanted to avoid the construction of sub-standard, large-scale developments that would dissolve into slums after the housing emergency eased. Thus, one of the focuses of apartment developments in the second quarter of the 20th century was the need to construct affordable, attractive and permanent housing. Cost efficiency was continuously emphasized in the construction process, especially for projects backed by the Federal Housing Administration (FHA). The FHA, established in 1934, became the primary mortgage insurers for thousands of residential projects, both single-family and multiple dwellings, throughout the country. The FHA's involvement in Arlington County directly impacted a number of large apartment complexes that would be constructed in the county between 1934-1954. Arlington County's location along the banks of the Potomac River across from Washington, D.C. attracted a number of developers with FHA-insured mortgages to construct these large-scale housing projects. Where the FHA was not directly involved, they influenced the designs and layouts of hundreds of complexes and individual apartments being built in the county. The dramatic increase in population during the 1930s and the limited availability of affordable rental housing for the middle-class government worker made Arlington County a prime development area.

Because the FHA would only finance housing that met its approved standards, first published in 1935, its requirements shaped suburban development. The FHA standards addressed seven specific issues: community, neighborhood, site, buildings, dwelling units, services and cost. Regarding the community, FHA required that the area currently support a "number of diverse sources of income for the families to be served" and specified that there be an existing need for the type of development contemplated. The FHA also required that the developers give "assurance[s] of continued harmonious land uses; [and] integration of the neighborhood and project." The site was to be distanced from industrial influences. Development was required to conform to existing site characteristics and standards were set for land coverage.¹⁸ Roads were to have a minimum right-of-way of fifty feet with a paved width of twenty-four feet. In 1938, the FHA began offering design reviews to developers of new subdivisions. The guidelines were revised again in 1941 to include curbs and a minimum paved width of twenty-six feet.¹⁹

Figure 13: Fillmore Garden Apartments, 2700-2706 9th Street, South (000-9036)

The influences of the FHA on the apartment housing in the survey area is illustrated at Fillmore Gardens (000-9026 through 000-9045), a large-scale garden apartment complex on the edge of the Penrose neighborhood. Planning of the twenty building complex began in 1941 when the Fillmore Corporation purchased a large twenty-three-acre tract of land along South Fillmore Street between Columbia Pike and 6th Street South as the site of the multi-family neighborhood. The Colonial Revival-style buildings were designed by the Alexandria-based construction firm of Banks and Lee, together with notable Washington, D.C. architect Arthur P. Davis. Construction took place in three phases between 1942 and 1948. The complex as originally erected included 552 rental apartments, 421 of which were one-bedroom units and 131 of which were two-bedroom units. The Washington Board of Trade Committee recognized the large-scale development for its architectural merit in 1943 with its annual architecture award.

Figure 14: Parkland Gardens, 4700-4710 20th Road, North (000-8967)

Similar garden apartment complexes were documented in Waverly Hills, including Parkland Gardens (000-8967 through 000-8972) in Waverly Hills. Constructed in 1942-1943, Parkland Gardens is located at the southeastern intersection of North Glebe Road and 20th Road North. The Colonial Revival-style complex includes six buildings originally containing 146 apartments, the vast majority being one-bedroom units. Only sixteen two-bedrooms units were provided. The brick buildings, adorned with concrete stringcourses and panels, were constructed by the Standard Construction Company to the design of prominent Washington, D.C.-based architect George T. Santmyers.

The New Dominion Period (1946-present)

In keeping with their historic counterparts, many of the dwellings erected during this modern period embodied the styles, materials, and forms traditionally utilized in Arlington County. However, the domestic buildings often utilized modern materials in the original design and incorporated the new interior planning ideals.

As noted in the previous period, the three- to five-bay-wide rectangular form continued to dominate the landscape of northern Arlington County. Drawing from the resurgence of the Colonial style prompted by the restoration efforts at Williamsburg, these dwellings exhibit accentuated entry doors, normally decorated with pediments supported by pilasters or slender columns. Dormers range in form from front gable, semi-circular arched, shed, wall dormers, and eyebrow windows. These two- to two-and-a-half-story dwellings are commonly constructed of wood frame or brick with side-gable roofs clad in asphalt shingles. Typically, the houses display a central-passage plan, although a substantial number of side-passage plans were documented.

Notable examples of modest rectangular box-like dwellings for middle-income residents are found along South 11th Street and South Frederick Street in Columbia Forest. Dating

from 1947, these Colonial Revival-style dwellings were erected by the Lindsey Construction Company. Each dwelling is two stories in height and between two- to three-bays wide, built of masonry construction using cinder block with brick facing, and capped by a side-gabled roof. The symmetry of the two-bay-wide façades is broken by the placement of a centrally placed entry or window opening. These buildings are similar in style, form, and scale to the houses located to the east of South Frederick Street in Columbia Forest, which were constructed in 1942 and 1945 by the Defense Homes Corporation (DHC) under the direction of the Army Corps of Engineers. The DHC housing consists of concrete-block and brick detached, two-story single-family dwellings, typically two to three bays wide with side-gabled roofs. Upon completion the modest dwellings were rented to young officers and ranking officials with families. At the end of World War II, the DHC was disbanded and the dwellings of Columbia Forest were sold to the public with a preference given to war veterans.

Examples of larger rectangular box-like dwelling targeted at the middle- to upper-middle-income residents dominated Woodmont and the northern section of Waverly Hills. These two-and-a-half-story buildings, very often with one-story side wings, were clad in brick facing. A number of upper stories were finished originally with aluminum siding, a variation of materials that visually suggests the overhanging jetty of Early English Colonial buildings. The dwelling constructed by M.T. Broyhill in 1949 at 4612 19th Road North (000-8863) is a good example of this.

Figure 15: House, 4612 19th Road, North (000-8863)

The traditional architect-designed dwellings in northern Arlington County were more commonly replaced in a number of neighborhoods like Waverly Hills by “the ranch house and the split-level, both designed to eke out maximum living space from the least square footage. Both house types exploited the trend toward horizontal living on wide building lots, as their shallow profiles made the most of available light and views.”²⁰ The

²⁰ Massey and Maxwell, p. 249.

ranch house, efficient and suited to a casual living style, was “perhaps the ultimate symbol of the postwar American dream.”²¹ Introduced by California architects in the mid-1930s, the ranch house was the most prominent residential building form in the United States by the late 1940s.²² The popularity of the ranch house was prompted by the increased dependency on the automobile, which allowed for the establishment of more sprawling residential neighborhoods in areas where land had traditionally been undeveloped. The low cost of construction allowed developers to mass-produce the structures in planned neighborhoods and developments. It also allowed individual property owners to affordably build their own homes, which were typically isolated but not far from commercial, business, and transportation corridors.

Figure 16: House, 2012 North Woodstock Street (000-8921)

Ranch houses are traditionally single-story buildings with staggered façades and low-pitched roofs. The long, narrow form, which incorporated open-plan living areas, floor-to-ceiling windows and double-glass doors, emphasized the large lots with its horizontality. “The length of the house along the prospect of approach emphasizes its sprawling form, suggesting the comparative availability of land and the luxury of outdoor living.”²³ Because the ranch house neighborhoods were more commonly outside the metropolitan areas and required the owner to have a car, the asymmetrically designed dwellings usually included one-, two-, or even three-car garages built as integral parts of the structure, with interior access from the kitchen or utility room. The design of the ranch house was minimal with some elements of “traditional detailing based loosely on

Spanish or English Colonial precedents.²⁴ It was clad in a variety and combination of materials, including brick facing, wood shingles or weatherboard, aluminum siding, vinyl siding, and asbestos shingles. Porch supports, minimal in ornamentation, were decorative iron or wooden posts. Large picture windows, with either metal or wood surrounds, illuminated the living rooms.²⁵

Figure 17: House, 4612 20th Street, North (000-8879)

The M.T. Broyhill Company was responsible for the construction of many of the ranch houses in Waverly Hills. The buildings, built of wood frame with brick cladding, stand one story in height on solid basements. They are typically three to four bays wide and two bays deep, many with garages incorporated into the plan. The basic plan of the dwellings was identical throughout the neighborhood, with slight variation provided by the location of the chimney and main entry, width of window openings, and different cladding materials. An alteration to the traditional plan of a ranch house included a projecting front-gabled bay on the façade. This was noted for example at 4604 20th Street North (000-8881), an L-shaped ranch house erected in 1949. The sloping terrain of Waverly Hills also provided a divergence of design by the landscaping of front and side yards and garage locations, which if included in the plan were set at the foundation level on either the façade or side elevation. A number of the ranch houses had freestanding garages at the rear of the property. A preponderance of ranch houses were found in the section of Waverly Hills formerly known as the Costolow Estate, especially along North Woodstock Street, North Vermont Street, 19th Road North, 20th Place North, and 20th Street North where the Broyhill Company developed lots in 1949 and 1950.

²⁴ Virginia and Lee McAlester, *A Field Guide to American Houses*, (New York, NY: Alfred A. Knopf, 1985), p. 479.

²⁵ McAlester, p. 479; Howe, p. 370.

The construction of multi-family apartment complexes continued during the New Dominion Period, particularly in central and northern Arlington County. Vermont Terrace (000-8976 and 000-8977) in Waverly Hills is an excellent example of the form, scale, and architectural styles being constructed in the post World War II years. Vermont Terrace is a garden apartment complex located on North Woodrow Street and North Vermont Street. Constructed in 1952 by the Woodstock Development Corporation, the brick buildings stand three stories in height on slightly raised basements. It is composed of two buildings, one consisting of two structures attached to create an L-shaped plan and the other consisting of three structures joined in a U-shaped plan. Single-leaf public entries in each of the attached structures provide access to the central stair on the interior of the buildings. The L-shaped building at 2015-2055 North Woodrow Street originally contained twenty-three apartments, eight one-bedroom units and fifteen two-bedroom units. The U-shaped building at 2026-2030 North Vermont Street contained thirty-one apartments, ten one-bedroom units and twenty-one two-bedroom units. Other examples of apartment complexes dating from this period include the three buildings at 2040 North Vermont Street (000-8978) and 2060 North Vermont Street (000-8979), which were erected in 1949 by the Martin Brothers, and 4701-4703 20th Road North (000-8974), which is part of a complex erected in 1952 by M.T. Broyhill.

Figure 18: Vermont Terrace, 2026-2030 North Vermont Street (000-8977)

Figure 19: Garage, 4600 20th Street, North (000-8882)

Domestic Outbuildings

Typically, domestic resources constructed in Arlington County had associated outbuildings, particularly garages and sheds. These structures were commonly built of wood frame or brick, depending on the construction material of the main dwelling. The most significant number of outbuildings were constructed during the World War I to World War II period and the New Dominion period, usually simultaneous with the original construction period of the main dwelling. As a result, many of the garages mimic the form, scale, style, and cladding materials of the primary dwellings. Freestanding examples include the historic garages at 4600 20th Street North (000-8882) and 4512 20th Street North (000-8883). The Fillmore Corporation included several ten-car garages (000-9026) in their original design of the Fillmore Gardens Apartment complex. These one-story brick structures, facing onto a paved parking lot, have paneled roll-up garage doors and a molded cornice on the flat roof.

Figure 20: Fillmore Gardens Garage, 601-607 Walter Reed Drive (000-9026)

In an attempt to attract upper-middle-income residents, many of the dwellings were constructed with the associated garage as part of the main block. Often, dwellings like the rectangular box-like structures adorned in Colonial Revival-style detailing from the second quarter of the 20th century present a rectangular three- to five-bay-wide plan augmented by a one-story side wing that houses the automobile. This was noted at 4601 20th Street North (000-8890), 2355 North Quincy Street (000-9010), and 3821 Lorcom Lane (000-9012). As the dependence on the automobile increased, the garage became an essential part of the dwelling. This is illustrated at 4612 20th Street North (000-8879) and 3815 Lorcom Lane (000-9013).

The second most common outbuilding identified was the shed, which is actually a catchall term often applied to any storage or unidentified structure. The form is typically one story in height and is constructed of wood frame or prefabricated metal. Other notable outbuildings include carports, barbecues, playhouses, pools/pool houses, and guesthouses.

ⁱ Plat of Willette Heights, filed by Willette Heights Corporation on February 6, 1919. On file at Arlington County Land Records, Office of the Clerk.

RESEARCH DESIGN

Objectives

The goal of the multi-phase project was to gather and evaluate information about the historic properties and their resources within Neighborhood Service Areas A, B, C, and D in an effort to more fully comprehend and support their contribution to the County's heritage. Particular emphasis was placed on those properties located within Waverly Hills, a large portion of which was designated to the Virginia Landmarks Register and the National Register for Historic Places. The project was intended to: 1) synthesize and complete documentation of previously identified historic properties into a computerized database format; 2) collect additional information and survey previously unidentified or unevaluated historic properties and potential historic districts; and 3) heighten public awareness about historic resources in Arlington County to encourage citizen appreciation of their history.

Scope of Work

The project was organized into basic tasks:

- 1) The survey and documentation to the reconnaissance level of approximately 550 historic resources in Neighborhood Service Areas A, B, C, and D, with emphasis placed on those properties Waverly Hills. Phase I included the identification and survey of 761 resources within Neighborhood Service Area H and the Target Areas of Arna Valley, Nauck, and Columbia Heights West. Phase II completed the survey of 1,015 resources in Neighborhood Service Areas H and G, Glen Carlyn, and a portion of the Barcroft neighborhood community. Phase III comprehensively documented 776 resources in Neighborhood Service Areas D and F, as well as North Highlands in Service Area E, all to the 1936 date of construction as based on historic maps and on-site survey. Phase IV, identifying 805 properties, began the study of the Rosslyn-Ballston Corridor at the eastern end of this major transportation corridor. Phase V continued the survey efforts of Phase IV, focusing on the documentation of 809 properties at the western end of the Rosslyn-Ballston corridor. Phase VI recorded 1,010 properties in select service areas in an effort to identify significance historic neighborhoods; and
- 2) The identification of potential historic districts and individual properties eligible for listing on the Virginia Landmarks Register and the National Register of Historic Places.

Methodology

Approach

E.H.T. Tracerics approached this project as a coordinated effort of experienced professional architectural historians working with the Department of Community Planning, Housing and Development and the Virginia Department of Historic Resources (VDHR) in an effort to produce a cost effective survey that would meet VDHR's high standards, as well as provide necessary information to Arlington County.

This was accomplished by working closely with Arlington County and its representatives to identify important architectural resources; by taking full advantage of the Data Sharing Software (DSS) database to document and analyze historic properties; by understanding the history and geography to insure that selected cultural resources accurately illustrate the County's historic context through the best-preserved and least-altered examples as subsumed under VDHR's eighteen historic context themes; by utilizing years of sound survey experience to ensure an efficient effort; by employing a management methodology that is designed to result in an on-time performance; and by maximizing the potential of an experienced staff.

To achieve the desired products, E.H.T. Tracerics organized a team with the credentials, skills, and successful experience to do the work. The team was composed of five members: a Project Director/Senior Architectural Historian and five Architectural Historian/Surveyors. The Project Director/Senior Architectural Historian managed the administration of the survey project, directed the tasks and was responsible for preparing the Final Survey Report. She also functioned as the primary architectural historian, working with the team to evaluate the resources based on the historic context prepared in Phase I. Additionally, the Senior Architectural Historian was responsible for assessing potential landmarks and historic districts. The Architectural Historian/Surveyors managed the information on previously recorded resources – synthesizing, consolidating, undertaking data entry, locating the properties and resources, and updating records as appropriate. They worked together in the field, surveying and documenting resources that met the survey criteria.

Basic to the methodology was the determination of criteria for selecting properties to be surveyed using VDHR standards, historic themes, and requirements. This was a team effort that allowed on-site decision-making. A system was established to select properties for survey by synthesizing the VDHR standards, the eighteen VDHR historic context themes, the basic historic context outline, and VDHR contractual requirements. Next, a plan was developed for managing the information on the previously recorded properties, for updating records as necessary, and for identifying and surveying 550 new resources for survey at the reconnaissance level.

The recordation of the properties to VDHR standards ensured the successful completion of the contract. Implementing the Survey Design, 550 resources were surveyed to a reconnaissance level by E.H.T. Tracerics. All previously recorded properties were located

and information brought up to a standard equal to that employed for the newly identified resources.

Each reconnaissance level survey form recorded a single property, including its primary and secondary resources. Each completed form for resources that contained a contributing primary resource included a detailed physical description of that primary resource as well as a brief description of the secondary resources on the property. It also included a brief evaluation of the property as an entity, placing it in its local historical and architectural context. Labeled, black-and-white photographs that document the resource accompanied all forms. The photographic documentation included a range of two to five views, with an average of two to three views of the primary resource and a minimum of one photograph per contributing secondary resource or group of secondary resources if located close together. The photographs sufficiently illustrate the architectural character of the primary resource: at least one photograph was taken at close range. A simple site plan sketch of the property indicating the relationship between primary and secondary resources was completed for each surveyed property. The site plans were prepared neatly in pencil on graph paper. The site plan sketch included the main road and any significant natural features. Copies of the relevant sections of USGS Quadrangle maps and county base maps were submitted with each group of forms as required.

Representative examples of cultural resources over fifty years old were selected for recordation using our understanding of the history of Arlington County and related architecture. With assistance from the VDHR staff and the Department of Community Planning, Housing and Development of Arlington County, survey priorities were established. Efforts were made to identify the best-preserved and least-altered examples of various resource types subsumed under the eighteen VDHR historic themes. Special attention was paid to early outbuildings and structures, significant buildings in poor condition or threatened by imminent destruction, resources related to ethnic minority cultures, pre-1860 resources, including outbuildings and farm structures, previously surveyed properties that warranted updated or additional information, and significant buildings that may be affected by transportation network improvements (i.e. road or railroad construction). At the request of Arlington County, all properties with primary resources despite the date of construction within a defined boundary of Waverly Hills were surveyed.

E.H.T. Tracerics utilized building permit cards, provided by the Department of Community Planning, Housing and Development to document the construction dates and builders of each property recorded.

Work Plan

Implementation of the proposed work was based on an incremental process as outlined in the following seven task descriptions.

TASK 1:	Project Organization and Management
TASK 2:	Survey Design (including Initial Public Presentation)
TASK 3:	Survey
TASK 4:	DSS
TASK 5:	Evaluation of Properties
TASK 6:	Architectural Survey Report
TASK 7:	Project Completion

TASK 1: PROJECT ORGANIZATION AND MANAGEMENT

Project organization consisted of the establishment of a work schedule, coordination of the team members and the County staff, establishment of work assignments, arrangement for the necessary materials to undertake the work tasks, and maintenance of the project schedule.

The project director, largely responsible for organization and management, functioned as liaison between Arlington County, the Department of Historic Resources, and the project team. Activities included regular monitoring of the project's progress, preparation of the monthly progress reports, problem solving in conjunction with VDHR and project staff, and attendance at required progress meetings with the County and VDHR representatives.

The project was managed through a system of task-oriented hierarchy. Incremental monitoring was combined with milestone review indicated as "results" for each task listed in the work plan. The monthly progress reports recorded milestone completion for VDHR review.

TASK 2: SURVEY DESIGN

Prior to beginning fieldwork, all existing materials relevant to Arlington County contained within the VDHR archives were reviewed. Materials contained within the County's collection at the Historical Society, the Library of Congress, the Virginia Room at the Arlington County Library and archives at other repositories in the county, as well as state and federal archives, were reviewed.

Arlington County planning staff was consulted regarding any newly proposed development projects that may affect the future of the survey areas' historic resources. Documents, including the local comprehensive plan, Virginia Department of Transportation Six-Year Plan, and public utility plans, were reviewed.

In preparation for fieldwork, the reviewed materials, building permit cards, maps and previous survey route were studied to determine the best approach for covering as much of

the survey area as possible. As in all phases, properties were selected based on the Survey Criteria as stated in the RFP Section III. STATEMENT OF NEED; C. SURVEY CRITERIA. This information was discussed and the potential course of action prepared for the County staff's review and approval. The survey design was revised and up-dated as necessary during the course of the on-site and archival efforts.

During this phase, a public meeting was held to explain the survey effort to interested Arlington County officials, members of local historical associations, residents and owners. A general presentation introduced the survey team, explained the survey effort and its history, addressed County and VDHR preservation goals, and presented the survey design. Attendees were asked to provide information that might aid the effort. The presentation included slides that illustrated the accomplishments of the Phase VI survey effort and discussed the anticipation for Phase VII activities, the VDHR survey process, and the survey's potential for protecting Arlington County's historic architectural resources.

TASK 3: SURVEY

Upon completion of a survey schedule, the surveyors began the on-site survey work, following assigned routes. All work followed VDHR standards and properties selected during the on-site survey met the published Survey Criteria. Selected properties were documented to the reconnaissance level as appropriate, including site plans and photographs of the exterior and interior where appropriate (and possible). Color slides were taken as appropriate throughout the survey effort. The photographs taken on-site were developed as the survey progressed. As the 3-1/2" by 5" black-and-white photographs were processed, labeling in pencil was conducted. Negative lists, negatives and color slides were also labeled to VDHR standards. All information collected during this task was filed into property file folders.

Concurrent with the on-site survey, archival sources were researched at the local, state, and federal level, including primary and secondary sources. The bibliography developed in Phase I, and augmented in the subsequent phases, was expanded to include the additional sources. As information was gathered, it was synthesized with individual property survey files.

TASK 4: DSS

Information collected and recorded during the on-site field survey was entered into the Virginia Department of Historic Resources-Data Sharing Software database (VDHR-DSS). Data on each property surveyed was recorded as a single DSS record, as required by the VDHR survey program. At appropriate intervals throughout the project, each DSS property record was reviewed for accuracy and consistency. Upon review of the database and following corrections, frequency reports and tabular reports were generated. These reports provided organized data for analysis and incorporation into the Architectural Survey Report.

Various computer reports were generated for this project including:

- Arlington County Survey: Inventory of All Properties by VDHR ID Number
- Arlington County Survey: Inventory of All Properties by Name

VDHR-DSS was an important component of the survey, and will be a useful planning tool for Arlington County. The information in the database can be updated as needed and used to generate a variety of reports beyond those prepared for this study.

TASK 5: EVALUATION OF PROPERTIES

Reports generated by DSS were analyzed and properties considered potentially eligible as individual landmarks and as historic districts for listing on the Virginia Landmarks Register and the National Register of Historic Places were evaluated within the context of the survey database, historic themes and historic context.

TASK 6: ARCHITECTURAL SURVEY REPORT

On-site and archival findings were assembled and synthesized in preparation for review prior to drafting the final report. One set of VDHR survey file envelopes were labeled for VDHR; one set of manila file folders for the County. The appropriate documentation, labeled photographs and negatives, and site plans were placed in the appropriate envelope or file. USGS Quadrangle Maps and County Base Maps were marked to indicate the surveyed properties for both VDHR and the county. All envelopes/files were checked for completion.

The Architectural Survey Report was prepared in conformance with the VDHR Guidelines for survey reports. Historic properties associated with the relevant themes were discussed in the historic context narratives. Illustrations, including photographs, drawings, maps, tables, charts, and other graphics were prepared. The draft document was distributed to the County and VDHR.

TASK 7: PROJECT COMPLETION

All required products were prepared for the County and VDHR. The DSS documentation was submitted to VDHR. Two diskettes holding a copy of the text of the Architectural Survey Report in Word 7.0 were prepared. Two original unbound and ten (10) bound copies of the Architectural Survey Report were prepared. Two sets of hard-copy survey forms, photographs, maps, and other materials were made ready for submission. One set of negatives was prepared for VDHR. All products were submitted to the appropriate body.

At the completion of the survey, a final presentation was made to a selected official body in the County. This presentation summarized the findings and responded to questions and issues.

SURVEY FINDINGS

ARLINGTON COUNTY DATABASE HOLDINGS

The survey and documentation of properties in Arlington County was completed to the approved standards of the Virginia Department of Historic Resources. The results of the survey project are as follows:

Five Hundred Fifty (550) properties were recorded to the Reconnaissance Level. Each Reconnaissance Level Survey Form recorded a single property, including primary and secondary resources.

- Five Hundred Fifty (550) properties were evaluated as historic or significant to the historic context of Arlington County and fully surveyed to the reconnaissance level. Each form provides a detailed physical description of the primary resource as well as a brief description of the secondary resources on the property. It includes a brief evaluation of the property, placing it in its local historical and architectural context. Labeled, black-and-white photographs that adequately document the property's resources accompany each form. Adequate photographic documentation includes several views of the primary resource and a minimum of one photograph per historic secondary resource or group of secondary resources if they are located close together. Photographs illustrate the architectural character of the resource, with at least one photograph taken at close range. A simple site plan sketch of the property indicating the relationship between primary and secondary resources is included for each surveyed property. The site plan sketch indicates the main road and any significant natural features such as creeks and rivers. A copy of the relevant section of the county base map is filed with each form. The survey area was marked in pencil on a USGS map.

ANALYSIS OF SURVEY FINDINGS

The VDHR-Data Sharing Software (VDHR-DSS) is an on-line system developed to meet VDHR's computer needs and desires. Survey documentation prepared as part of Phase I through V were entered into VDHR-Integrated Preservation Software (VDHR-IPS), a system developed by the National Park Service and customized to best serve VDHR. All records entered into IPS have been converted into DSS by VDHR and are now available on-line. The documentation for Phases VI and VII, collectively totally 1,560 properties, was entered into DSS. With the completion of the data-entry in Phase VII and the conversion of the previously entered IPS records, the master DSS database for Arlington County contains 6,134 properties.

Analysis of Survey Findings

Statistical information was derived from the survey findings by producing computer-generated reports. These reports are designed to yield specific kinds of information for the appropriate analysis of survey findings. Some of the information entered into the database is factual, being based upon quantitative analysis; other information is valiative, and is based upon Tracerics' understanding and evaluation of architectural and historical data collected during the survey. The computer-generated reports represent both factual and valiative assessments, and provide statistics on important trends and aspects of the built environment of Arlington County.

The following analysis was prepared by architectural historians at Tracerics and is based upon a professional understanding of the historic properties and resources surveyed, taking into consideration the needs and requirements of Arlington County and VDHR.

- Identification of Properties

Each record in the computer represents a property that is a location defined by a perimeter measurement, such as a lot or parcel of land or a determined environmental setting. Five hundred fifty properties were identified and surveyed during the course of this project. These properties were identified in two ways: first, by using the 1936 and 1954 Sanborn Fire Insurance Maps of Arlington County, the 1943 Franklin Survey of Arlington County which indicates the site of resources (*i.e.* the footprint of a building or structure), and the building permit cards; second, through visual identification of primary resources that were not indicated on the historic maps but appeared to hold architectural significance associated with the recent past.

- Categorization of Properties

Each property record is initiated with the determination of a property category for the property as an entity. This categorization reflects the type of resource that is considered to be the primary resource and the source of the property's historicity. The five property categories are as follows: building, district, structure, site, and object. The definitions used are included in *National Register Bulletin: How to Apply the National Register Criteria for Evaluation* as follows:

Building: A building, such as a house, barn, church, hotel, or similar construction, is created to shelter any form of human activity. "Building" may also refer to a historically, functionally related unit, such as a courthouse and jail or a house and barn.

District A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.

Site A site is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, when the location itself possesses historic, cultural, or archeological value regardless of the value of any existing structure.

Structure The term "structure" is used to distinguish from buildings those functional constructions made usually for purposes other than creating human shelter.

Object The term "object" is used to distinguish between buildings and structures those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed. Although it may be, by nature and design, movable, it is associated with a specific setting or environment, such as statuary in a designed landscape.

- VDHR Historic Themes and Period Contexts

VDHR has defined eighteen cultural themes for Virginia's culture history from prehistoric times to the present. Although a property may relate to one or more of the defined themes, only the most relevant themes are indicated in the database.

ARLINGTON COUNTY SURVEY: VDHR THEMES	NUMBER OF ASSOCIATED PROPERTIES
Architecture/Community Planning	550
Commerce/Trade	6
Domestic	544
Education	0
Ethnicity/Immigration	0
Funerary	0
Government/Law/Political	0
Health Care/Medicine	0
Industry/Processing/Extraction	0
Landscape	0
Military/Defense	0
Recreation/Arts	0
Religion	0
Settlement Patterns	0
Social	0
Subsistence/Agriculture	0
Technology/Engineering	0
Transportation/Communication	0

Notably, the number of historic context themes identified during each phase is reduced as the on-site fieldwork progresses northward through the county. The greatest number of themes was recorded in Phase I, with eleven contexts noted. Phases II and III documented fourteen and nine themes, respectively. During Phase IV, the Industry/Processing/Extraction theme was identified for the first time. However, the seven other themes had been recorded in previous years. In Phase V, only seven of the themes were noted. Phase VI documented eight themes. This most current survey recorded only three themes.

In Virginia, it is anticipated that a property will include at least one resource, usually considered its primary resource. The historic character of that resource is usually the basis upon which the determination of the property's overall historic or nonhistoric status is made.

The proper categorization of a property is dependent on the proper identification of the primary resource. For example, a property that includes a large residence built in the 1870s and several outbuildings from the same period would be categorized as a "BUILDING." Another property that includes a large residence built in 1995 near the foundation of an 18th century farmhouse would gain its historic status from the archeological potential of the site that is composed of the foundation and its environs, not from the no longer extant original building nor from the new house, therefore this property would be categorized a "SITE."

ARLINGTON COUNTY SURVEY: PROPERTY CATEGORIZATION	TOTAL NUMBER OF PROPERTIES
Buildings	550
Districts	0
Objects	0
Sites	0
Structures	<u>0</u>
TOTAL CATEGORIZED PROPERTIES	550

- Determination of Historic Status

The identification of properties and their categorization was followed by the determination of a historic status for the property. For this survey, historic was defined as possessing the capacity to convey reliable historic information about the physical and cultural development of Arlington County. **It was not interpreted as a measure of the level of significance of that information.**

Properties were considered HISTORIC if:

- The primary resource was fifty years of age or more; or
- The resource possessed the capacity to convey reliable historic information about the physical and cultural development of Arlington County.

Properties were determined to be NONHISTORIC if:

- The primary resource was less than fifty years of age;
- No primary resource was visually evident; or
- The primary resource was altered to a level that any historic integrity it might have possessed was significantly destroyed or obscured.

ARLINGTON COUNTY SURVEY: PROPERTY CATEGORIES	TOTAL	HISTORIC
Buildings	550	489
TOTAL CATEGORIZED PROPERTIES	550 total	489 historic

Primary Resources

For the 550 properties included in the database, three different primary resource types were identified throughout the survey area. The following report identifies the number of identified resource types for each property:

ARLINGTON COUNTY SURVEY: PRIMARY RESOURCE TYPE CONTAINED BY CONTRIBUTING PROPERTIES	NUMBER OF PRIMARY RESOURCES RECORDED
Commercial Building	6
Multiple Dwelling	37
Single Dwelling	507

The Phase VII resulted in the identification of many of the same property types as several of the previous surveys – Phase I recorded eleven, Phase II recorded thirteen, Phase III recorded nine, Phase IV recorded seventeen, Phase V documented thirteen, and Phase VI recorded nine. However, the nature of the development in this northern section of the county has noticeably reduced the number of property types identified.

RECOMMENDATIONS

A. Recommendations for Further Study

- Phases VIIB and VIII Architectural Surveys

The first phases of the project completely surveyed Neighborhood Service Areas D, E, F, G and H, as well as the selected Target Areas. Neighborhood Service Area H was comprehensively surveyed to include resources erected prior to 1942, while Neighborhood Service Areas F and G were comprehensively surveyed to include resources erected prior to 1936. Portions of Neighborhood Service Area D included in the 1936 comprehensive survey are Lyon Park and Ashton Heights. The Target Areas – Nauck, Arna Valley, and Columbia Heights West -- were documented to the 1942 date of construction, as indicated by historic maps. Within Service Area E, the community of North Highlands was comprehensively documented to the 1936 date of construction. The Rosslyn-Ballston Corridor between the Potomac River and Glebe Road along Wilson Boulevard was documented to the 1954 date of construction.

Therefore, it is recommended that those areas within Neighborhood Service Areas D, E, F, and G that were surveyed to the 1936 date should be further examined to insure the proper documentation of resources constructed between 1936 and 1954. The Building Permit Card should be used along with the Sanborn Fire Insurance maps and the Franklin maps to ensure the date of construction and documentation of the architect and builder. Several neighborhoods within these Service Areas have been comprehensively surveyed during the nomination of the community to the Virginia Landmarks Register and the National Register of Historic Places, and therefore do not require additional survey work.

Furthermore, the reconnaissance level survey of Arlington County should be continued at all costs to ensure a comprehensive recordation of its historic properties and the context in which they developed. Within Neighborhood Service Areas A, B, and C the following communities should be surveyed: Woodmont, Riverwood, Dover-Crystal, Donaldson Run, Bellevue Forest, Rivercrest, Arlingwood, Chain Bridge Forest, Gulf Branch, Old Glebe, Stafford-Albemarle-Glebe, Arlington-East Falls Church, Bluemont, Boulevard Manor, Dominion Hills, Highland Park/Overlee Knolls, Leeway Overlee, Madison Manor, Old Dominion, Rock Spring, Tara-Leeway, Westover, Williamsburg, and Yorktown.

- Properties to be Surveyed at the Intensive Level

The following properties were included in this survey at a reconnaissance level; however, the architectural and/or historical significance of the primary resource warrants intensive-level survey, as these properties may be eligible for the National Register of Historic Places.

1. House, 4001 24th Road, North (000-8986)
2. House, 3815 Lorcom Lane (000-9013)
3. Modern Movement Cape Cod Houses along North Woodstock Street and North Vernon Street

B. Evaluation/Recommendations for Designation

- Standards for Evaluation

The properties identified in the Phase VII Architectural Survey of Arlington County have been evaluated on a preliminary basis for their historic significance at the local, state, and national levels. As stated in the Secretary of the Interior's Standards for Evaluation, evaluation is the process of determining whether identified properties meet defined criteria of significance and whether they should, therefore, be included in an inventory of historic properties determined to meet the established criteria.

In association with the Secretary of the Interior's *Standards for Evaluation* is the Secretary of the Interior's *Guidelines for Evaluation*. These guidelines describe the principles and process for evaluating the significance of the identified historic properties. In evaluating the historic resources of Arlington County, both the *Standards* and *Guidelines for Evaluation* were consulted. As a first step, the guidelines suggest that criteria used to develop an inventory of historic properties should be coordinated with the National Register of Historic Places. In the case of Arlington County, the evaluation process was conducted using the National Register of Historic Places criteria and the Virginia Landmarks Register criteria. The National Register of Historic Places is the official national list of recognized properties, which is maintained and expanded by the National Park Service on behalf of the Secretary of the Interior. The Virginia Landmarks Register criteria, established in 1966, are coordinated with those established for the National Register.

The National Register of Historic Places Criteria states:

The quality of *significance* in American history, architecture, archeology, and culture is present in districts, sites, buildings, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embodies the distinctive characteristics of a type, period, or method of construction or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.

Similarly, the Virginia Landmarks Register criteria are set forth in the legislation as follows:

No structure or site shall be deemed historic one unless it has been prominently identified with, or best represents, some major aspect of the cultural, political, economic, military, or social history of the State or nation, or has had a relationship with the life of an historic personage or event representing some major aspect of, or ideals related to, the history of the State or nation. In the case of structures which are to be so designated, they shall embody the principal or unique features of an architectural style or demonstrate the style of a period of our history or method of construction, or serve as an illustration of the work of a master builder, designer or architect whose genius influenced the period in which he worked or has significance in current times. In order for a site to qualify as an archaeological site, it shall be an area from which it is reasonable to expect that artifacts, materials, and other specimens may be found which give insight to an understanding of aboriginal man or the Colonial and early history and architecture of the state or nation.

A second consideration cited by the guidelines suggests that the established criteria should be applied within particular historic contexts. In the case of Arlington County, the criteria were examined to determine how they might apply to properties within the given context. The historic contexts are synonymous with the eighteen historic themes developed by the VDHR and listed as follows:

Domestic Theme: This theme relates broadly to the human need for shelter, a home place, and community dwellings.

Subsistence/Agriculture Theme: This theme most broadly seeks explanations of the different strategies that cultures develop to procure, process, and store food.

Government/Law/Political Theme: This theme relates primarily to the enactment and administration of laws by which a nation, state, or other political jurisdiction is governed; and activities related to politics and government.

Health Care/Medicine Theme: This theme refers to the care of sick, elderly and the disabled, and the promotion of health and hygiene.

Education Theme: This theme relates to the process of conveying or acquiring knowledge or skills through systematic instruction, training, or study, whether through public or private efforts.

Military/Defense Theme: This theme relates to the system of defending the territory and sovereignty of a people and encompasses all military activities, battles, strategic locations, and events important in military history.

Religion Theme: This theme concerns the organized system of beliefs, practices, and traditions regarding the worldview of various cultures and the material manifestation of spiritual beliefs.

Social Theme: This theme relates to social activities and institutions, the activities of charitable, fraternal, or other community organizations and places associated with broad social movements.

Recreation and the Arts Theme: This theme relates to the arts and cultural activities and institutions related to leisure time and recreation.

Transportation/Communication Theme: This theme relates to the process and technology of conveying passengers, materials, and information.

Commerce/Trade Theme: This theme relates to the process of trading goods, services, and commodities.

Industry/Processing/Extraction Theme: This theme explores the technology and process of managing materials, labor, and equipment to produce goods and services.

Landscape Theme: This theme explores the historic, cultural, scenic, visual and design qualities of cultural landscapes, emphasizing the reciprocal relationships affecting the natural and the human-built environment.

Funerary Theme: This theme concerns the investigation of gravesites for demographic data to study population, composition, health, and mortality within prehistoric and historic societies.

Ethnicity/Immigration Theme: This theme explores the material manifestations of ethnic diversity and the movement and interaction of people of different ethnic heritages through time and space in Virginia.

Settlement Patterns Theme: Studies related to this theme involve the analysis of different strategies available for the utilization of an area in response to subsistence, demographic, socio-political, and religious aspects of a cultural system.

Architecture/Landscape Architecture/Community Planning Theme: This theme explores the design values and practical arts of planning, designing, arranging, constructing and developing buildings, structures, landscapes, towns and cities for human use and enjoyment.

Technology/Engineering Theme: While the technological aspects of a culture form the primary basis of interpretation of all themes, this theme relates primarily to the utilization of and evolutionary changes in material culture as a society adapts to the physical, biological, and cultural environment.

After determining how the criterion applies, the Secretary of Interior's *Guidelines for Evaluation* suggests that the integrity of a property should be assessed. In evaluating the integrity, factors such as structural problems, deterioration, and abandonment should be considered if they have affected the significance of the property. In surveying the properties of Arlington County, the integrity of the resource was evaluated using the seven aspects as defined in *National Register Bulletin: How to Apply the National Register Criteria for Evaluation*. The aspects include location, design, setting, materials, workmanship, feeling, and association. The seventh aspect, association, was not always evaluated while conducting on-site survey work, and often requires further archival research.

Based upon the state and national guidelines and criteria, all of the properties in Arlington County were evaluated for potential nomination to the Virginia Landmarks Register and the National Register of Historic Places.

- Recommendations for Further Analysis Regarding Nomination

Virginia Heights

An analysis, which establishes boundaries, should be prepared for Virginia Heights, a section of Columbia Heights west of South Frederick Road. This section of Columbia Heights was platted as Virginia Heights, a post-World War II subdivision of single-family dwellings, including a handful of the county's few surviving Lustron houses built in 1948. The neighborhood must be comprehensively surveyed and researched in-depth to determine its eligibility and integrity. Virginia Heights is now considered a part of Columbia Forest but is not included in the Columbia Forest Historic District as it was not part of the original development funded and designed by the Defense Homes Corporation (DHC) and Army Corps of Engineers.

- Recommendations for Designation to the National Register of Historic Places:

Fillmore Garden Apartments and Shopping Center

The Phase VII survey identified Fillmore Garden Apartments as a candidate for nomination to the National Register of Historic Places as a historic district within the context of the "Garden Apartments, Apartment Houses, and Apartment Complexes in Arlington County, Virginia: 1934-1954," which was prepared in 2002. The influences of the Federal Housing Authority (FHA) on the apartment housing in Arlington County is illustrated at Fillmore Gardens (000-9026 through 000-9045), a large-scale garden apartment complex on the edge of the Penrose neighborhood. Planning of the twenty building complex began in 1941 when the Fillmore Corporation purchased a large twenty-three-acre tract of land along South Fillmore Street between Columbia Pike and 6th Street South as the site of the multi-family

neighborhood. The Colonial Revival-style buildings were designed by the Alexandria-based construction firm of Banks and Lee, together with notable Washington, D.C. architect Arthur P. Davis. Construction took place in three phases between 1942 and 1948. The complex as originally erected included 552 rental apartments, 421 of which were one-bedroom units and 131 of which were two-bedroom units. The Washington Board of Trade Committee recognized the large-scale development for its architectural merit in 1943 with its annual architecture award. The repetition of building materials and common decorative elements, standard floor plans, and consistent low-rise scale helps give the Fillmore Garden Apartments the orderly and unified appearance characteristic of the Colonial Revival style. The two- and three-story buildings are constructed of brick accented with limestone. The buildings are detailed with limestone stringcourses, oculi windows, brick quoins, and parapet roofs. Colonial Revival-style surrounds of wood ornately frame the entry openings. The different types of casings include fluted pilasters supporting flat-arched lintels, pedimented lintels, and broken swan-neck or ogee pediments with ball finials. Three types of roof forms – flat with built-up asphalt roofing surrounded by a brick parapet along with hipped and side-gabled roofs with either slate or asphalt shingles – provide variety to the design.

The most high style detailing at Fillmore Garden Apartments ornaments the larger buildings along South Walter Reed Drive, which is a major transportation corridor through the county. These multiple dwellings are finished with flat-roof porticos with ornate balustrades, paired columns or posts, and semi-circular arched openings with keystones. The hipped roof of the building at 811-815 South Walter Reed Drive (000-9040) is topped by a bell-shaped cupola with a metal weathervane. The cupola is pierced by semi-circular arched openings with louvered wood vents. Similarly, the imposing dwelling at 615-631 South Walter Reed Drive (000-9044) has a tall pyramidal cupola set on a square base. Pierced by semi-circular arched openings with louvered wood vents, the cupola is edged by a balustrade. The first story of this building, which is reminiscent of the Governor's Palace at Colonial Williamsburg, has a colonnade with semi-circular arched openings that access the central courtyard of the apartment complex.

The apartment complex, like many of those erected in Arlington County, included a commercial shopping center specifically established to serve the residents of Fillmore Gardens and commuting motorists traveling through the area. The Fillmore Shopping Center at 2601-2705 Columbia Pike (000-9418-0005, survey as part of the Columbia Pike/South Walter Reed Drive Commercial Historic District nomination prepared in 2003) was constructed in 1948, the apartment complex's third phase of development. Designed in the Moderne style, the building was prominently located on the corner of Columbia Pike and North Walter Reed Drive. The stylistic detailing includes simple massing, horizontal emphasis, and curvilinear corners. The sizeable, one-story, flat-roofed, neighborhood shopping center consists of seven storefronts with various entry and window treatments. The elements that bring together the composition include the limestone facing, granite base, and articulated cornice motifs on every other storefront. The parapet walls at the façade step down to the east due to the grade change. Some of the storefronts feature recessed entries flanked by curved corner walls.

Waverly Hills

Phase VI and VIIA comprehensively surveyed a portion of Waverly Hills, which is located within the Waverly Hills neighborhood. The survey area is bounded by 20th Road to the north, North Utah Street to the east, Interstate 66 to the south, and North Glebe Road and North Vermont Street to the west. Development of this section of Waverly Hills is the result of the combination of five separate subdivisions platted between 1919 and 1939.

This section of the Waverly Hills neighborhood is an excellent example of the many residential subdivisions that emerged in Arlington County after the First World War to support the burgeoning population flocking to the nation's capital and its suburbs. The location of the neighborhood, lying between the Washington and Old Dominion Railroad, which provided easy access to and from Washington, D.C., and North Glebe Road, a historically important route, made the neighborhood an ideal location for a subdivision. The chronological development of the current Waverly Hills district is documented by its architecture, which includes a range of construction dates including the circa 1850 Glebe House, and the subdivision dwellings dating from 1930 up to the infill construction of the latter part of the twentieth century. Varying from large two-and-a-half-story dwellings to smaller one-story dwellings, the neighborhood is generally defined by its collection of Tudor Revival, Craftsman, and Colonial Revival-style residences. The architecture, as represented in Waverly Hills, reflects the suburbanization of the popular styles rather than the initial high-style expression. As a whole, the early-twentieth-century suburb of Waverly Hills achieved significance as a planned residential community developed between 1919 and 1945. Furthermore, the residences throughout Waverly Hills document the development of Arlington during the second quarter of the twentieth century, a time when Arlington was undergoing a permanent change from a rural community to a commuting suburb of Washington, D.C.

This section of Waverly Hills is recommended for listing in the Virginia Landmarks Register and the National Register of Historic Places.

During the middle part of the 20th century, the Waverly Hills neighborhood continued to expand to the north and west. These later sections are not recommended for inclusion in the historic district as they contain housing and commercial buildings that does not reflect the initial development of the neighborhood. However, it is recommended that a comprehensive survey of area not included in the historic district boundary be conducted. The collection of garden apartments and the commercial resources along Lee Highway necessitate further study to determine if individual or historic districts eligible for listing in the Virginia Landmarks Register and the National Register of Historic Places are present.
