**NATIONAL REGISTER OF HISTORIC PLACES  
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

**1. Name of Property**

historic name Arlington Heights Historic District  
other names/site number VDHR File Number: 000-3383

**2. Location**

street & number Bounded by Arlington Boulevard, South Fillmore Street, South Walter Reed Drive, Columbia Pike,  
and South Glebe Road not for publication N/A  
city or town \_\_\_\_\_ vicinity N/A  
state Virginia code VA county Arlington code 013 zip code 22204

**3. State/Federal Agency Certification**

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this X nomination    request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property    X meets    does not meet the National Register Criteria. I recommend that this property be considered significant    nationally    statewide X locally. (   See continuation sheet for additional comments.)

## 8. Statement of Significance

---

---

**Applicable National Register Criteria** (Mark "X" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

**Criteria Considerations** (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

**Areas of Significance** (Enter categories from instructions)

ARCHITECTURE; COMMUNITY PLANNING AND DEVELOPMENT

**Period of Significance** 1895-1957

**Significant Dates** 1909, 1924, 1938, 1947, 1949, 1950-51

**Significant Person** (Complete if Criterion B is marked above) N/A

**Cultural Affiliation** N/A

**Architect/Builder**

Beger, Charles

Behm, Fred

Flower, Carlos

Gaddy, Anthony and Joseph

Mace Properties, Inc.

Smith, B.M.

**SUMMARY DESCRIPTION**

Located approximately four miles west of Washington, D.C., Arlington Heights is a residential neighborhood comprised of 177.125 acres in central Arlington County, Virginia. Arlington Heights is surrounded by residential and commercial development. The automobile thoroughfares of Arlington Boulevard to the north and Columbia Pike to the south physically bound the neighborhood. Other boundaries include South Fillmore Street, South Walter Reed Drive, and South Highland Street from South 7<sup>th</sup> Street to Columbia Pike on the east and South Glebe Road on the west. Arlington Heights formed from the integration of twenty-five subdivisions platted between 1909 and 1978, with initial improvements in the form of modest single-family residences. These buildings collectively display architectural elements that reflect the neighborhood's entire period of development. The domestic buildings, constructed of both wood frame and masonry, are primarily set back from the road with wide sidewalks buffering them from the paved public roadways. Many properties incorporate driveways and freestanding garages. The residential lots vary in size, with the standard lot measuring approximately fifty feet by one hundred feet. The streets run in a slightly irregular grid pattern between Arlington Boulevard, Columbia Pike, South Walter Reed Drive, South Fillmore Street, and South Glebe Road. Because the neighborhood developed over time through an amalgamation of multiple subdivisions, there are slight variations in the streetscapes and lot configurations. Mature shade trees line many of the streets. Arlington Heights, while primarily a single-family residential neighborhood with a number of twin dwellings, is also home to garden apartments, one high-rise apartment building, a commercial building along South Glebe Road, a synagogue, a parsonage, a middle school with community center, and two landscaped parks.

The initial development in the farming community that became Arlington Heights consisted of multiple parcels that were subdivided between 1909 and 1935, as documented by historic maps. Of the pre-existing dwellings and those constructed during this period, approximately fifty remain standing today. An additional fifteen dwellings in the neighborhood date to 1936 and are oriented to Arlington Boulevard. These modest dwellings, located primarily in the B. M. Smith, Dye and Gloth, Sarah Bailey, and Arlington Plateau subdivisions and along Arlington Boulevard in the Robert Dye subdivision, were not constructed as part of a planned residential community. The slow development on small land tracts, primarily less than ten acres in size, accelerated as World War II (1941–1945) ushered in an unprecedented need for housing surrounding the nation's capital. Several subdivisions were platted prior to and following World War II to meet these housing needs. Subdivisions platted in the late 1930s expanded the neighborhood to its current boundaries. After World War II, subdivisions were platted to fill empty tracts between existing subdivisions or re-subdivided existing lots. Re-subdivision occurred as late as 1963 and 1978. Thus, Arlington Heights is characterized by two phases of suburban development, one before and one after World War II, spurred by the influx of middle-class residents.

Today, Arlington Heights contains a variety of architectural styles, building types and forms, which are primarily domestic buildings. Architectural styles include late-nineteenth-century and early-twentieth-century Colonial Revival, Craftsman, Tudor Revival, and International. The early- to mid-twentieth-century buildings often exhibit vernacular, less detailed interpretations of the fashionable styles becoming popular throughout the nation, while the later more modest development reflects the solid middle-class nature of the commuter suburb. Typical forms include American Foursquares, Cape Cods, and ranch houses. Arlington Heights contains three dwellings that have been positively identified as prefabricated kit or mail-order houses. Building types include single dwellings, twin dwellings, garden apartments, a high-rise apartment

---

building, religious buildings, an education building, and a commercial building. Although a number of the dwellings have replacement materials and/or small additions, the overall integrity of the neighborhood remains intact. The area making up the present-day Arlington Heights neighborhood consists of 610 properties with over 900 resources, including single dwellings, multiple dwellings, a commercial building, a synagogue, a parsonage, a middle school/community center, and two parks that have remained a centerpiece of the neighborhood, visually as well as socially.

**DETAILED DESCRIPTION**

**EARLY DEVELOPMENT OF ARLINGTON HEIGHTS: 1895-1935**

The two earliest buildings in Arlington Heights are located at 127 and 510 South Highland Street and date from the last decade of the nineteenth century. Designed in the Colonial Revival style, the dwelling at 510 South Highland Street was constructed circa 1895. The Colonial Revival style became and remained highly popular in the United States from 1880 to 1955. The style draws heavily on American Georgian- and English Adam-inspired precedents. The single-most defining characteristic of the Colonial Revival style is an emphasis on the main entrance surround. Entrance surrounds often feature pilasters supporting a pediment or entablature following a Georgian-style precedent or a fanlight above the door following an Adam-style precedent. The dwelling at 510 South Highland Street is two-and-one-half stories in height and three bays in width. Set on a stretcher-bond brick foundation, the wood-frame house has been clad with a stretcher-bond brick veneer. Covered by a hipped roof, the house has a projecting front-gabled bay with full returns and a raked cornice. The roof has overhanging eaves and features a wide, unadorned frieze board. The gable end features a Palladian window with square-edged surrounds. The interior chimney has a corbelled cap and is located near the gabled dormer. The single-leaf door is adorned with a one-light transom and occupies the central façade bay. The house is fenestrated symmetrically with one-over-one double-hung, wood-sash windows. The windows, like the entry, have squared-edged wood surrounds. In keeping with many of the Colonial Revival-style houses constructed at the turn of the twentieth century in Arlington County, this house has a one-story, wrap-around porch with Tuscan columns.

The house at 127 South Highland Street is another good example of the Colonial Revival style. Constructed circa 1895, the single dwelling has a front-gabled box form similar to other dwellings on South Highland Street. The dwelling features the later application of Queen Anne-style ornamentation. This Colonial Revival-style dwelling is wood-frame construction and has been re-clad in asbestos shingles. Covered by a front gable roof with overhanging eaves, the roof has full returns, a raked cornice, and an elaborate bargeboard. The gable end features a one-light fixed diamond-shaped window with a square-edged surround. The two-and-one-half-story, three-bay house features symmetrical fenestration with a single-leaf door occupying the central bay. The door is flanked with one-over-one double-hung, wood-sash windows with square-edged surrounds. A one-story, one-bay addition was constructed on the south elevation of the house, extending the façade one bay in width. The addition employs materials consistent with the main block and has paired one-over-one double-hung windows. The one-story porch has been altered to front both the main block and the addition. Now six bays wide, the porch has a half-hipped roof with turned posts and decorative brackets indicative of the Queen Anne style.

Between 1910 and 1935, thirteen of the extant fifty buildings constructed in Arlington Heights were Colonial Revival-style

---

---

dwellings. The Colonial Revival houses from this period exhibit simplified ornamentation and are typically two stories in height. Constructed circa 1917, the two-story, three-bay dwelling at 108 South Highland Street illustrates this simplified ornamentation. The dwelling is wood-frame construction and was originally clad in German siding; it has been re-clad in vinyl siding. The house is covered by a front gable roof with full ogee-molded returns, a raked cornice, and an unadorned frieze board. Flanked by one-over-one double-hung windows, the single-leaf entry occupies the central bay. Although the entrance does not have a Colonial Revival-style surround, the symmetrical fenestration and square-edged window surrounds are illustrative of the style. A one-story, wrap-around porch has been partially enclosed on the south elevation. The porch has wood posts with decorative brackets supporting its half-hipped roof. Several other examples of the Colonial Revival style from this early period exist throughout Arlington Heights: 719 South Glebe Road, 627 Garfield Street, 3004 6<sup>th</sup> Street South, 309 South Highland Street, and 3017 2<sup>nd</sup> Street South.

Another building form of the early twentieth century found in Arlington Heights is the American foursquare, commonly ornamented with Colonial Revival- and/or Craftsman-style detailing. The two-story, four-rooms-per-floor plan without a hall is a much-used concept that refers to the hall/parlor plan of the eighteenth century. One illustration of the American foursquare exhibiting architectural detailing fashionable in the early part of the twentieth century is the house at 401 South Highland Street, constructed circa 1915. This two-and-a-half-story, two-bay, hipped-roof dwelling has Craftsman-style detailing. Set on a rock-faced concrete-block foundation, the building is wood-frame construction. The first story has been re-clad in vinyl siding and the second story re-clad in Hardiplank shingles. A one-story, full-width porch with Craftsman-style posts set on concrete-block piers fronts the dwelling. The single-leaf entry has five-light sidelights and a square-edged surround. Other examples of the American foursquare from this period are located at 3011 and 3103 2<sup>nd</sup> Street South.

Arlington Heights includes four Tudor Revival-style dwellings constructed between 1920 and 1930. The Tudor Revival style was popular in the United States from 1890 to 1940. Post-medieval dwellings in England inspired many characteristics of the Tudor Revival style. These English dwellings featured steeply pitched roofs, prominent chimneys, asymmetrical facades, and wall surfaces elaborated with half-timbered construction, clay tiles, or stucco. The dwellings could be clad in multiple materials: stucco, brick, stone, and wood. Other architectural details included arched doorways with cut stone surrounds, window ribbons of either casement or double-hung sash, prominently located massive chimneys, parapeted gables, cast stone trim, and patterned brickwork. The Tudor Revival style reached the height of its popularity, especially in suburban housing construction, during the 1920s and early 1930s. During this time, only the Colonial Revival style rivaled the Tudor Revival style for fashionability and popularity. Tudor Revival-style dwellings increased in popularity after World War I (1914-1918) as masonry veneering techniques allowed modest dwellings to mimic their English prototypes. The house at 626 South Garfield Street is a two-story, two-bay, Tudor Revival-style structure constructed circa 1920. The dwelling has a hipped roof and a prominent, projecting entry vestibule with an asymmetrical front gable. The house exhibits simplified Tudor Revival detailing such as stone quoin embellishments around the door and random, uncut stone inserted within the seven-course American-bond brick veneer. The six-over-one double-hung, wood-sash windows have rowlock sills and soldier lintels. Other dwellings that exemplify the Tudor Revival style erected prior to 1930 are 3215 7<sup>th</sup> Street South, 615 South Highland Street, and 516 South Fillmore Street.

Two of the three prefabricated kit or mail-order houses are identifiable in Arlington Heights from the years prior to 1935. These mail-order dwellings are both from Sears, Roebuck and Company (Sears). Between 1908 and 1940, Sears offered

---

---

450 ready-to-assemble designs that approximately 100,000 American families purchased. As Katherine Cole Stevenson and H. Ward Jandl explain in *Houses by Mail*, the intention of Sears housing was to fill a need for “sturdy, inexpensive and, especially, *modern* homes – complete with such desirable conveniences as indoor plumbing and electricity.” During the late nineteenth and early twentieth centuries, firms like the Hodgson Company, Alladin Homes, and Montgomery Ward competed with Sears in the mail-order house business, but Sears, by far, sold the largest volume of housing. Their designs ranged from mansions to bungalows to cottages. Purchased by mail, house kits were sent by railroad as close to the construction site as possible. The kits included pre-cut lumber at a time when power tools were scarce as well as complete specifications and instructions for the construction process. Based on popular tastes of the period, Sears housing had broad appeal and acceptance, which increased their salability. Coupled with the appeal of their designs, Sears’s reputation for quality products at a reasonable price made the company a solid choice to consumers making a major home purchase.<sup>1</sup> The Sears houses in Arlington Heights, 116 South Garfield Street built circa 1927 and 504 South Highland Street built circa 1925, are Craftsman-style bungalows. The one-and-one-half-story, two-bay wood-frame dwelling on South Garfield Street appears to be the “Sheridan,” a model sold between 1925 and 1929. This model ranged in price from \$2,095 to \$2,256. This house has a full-width Craftsman-style porch, which is now screened-in. The side gable roof has overhanging eaves embellished with knee braces. The gable ends are clad in wood shingles. Knee braces also embellish the prominent front-gabled dormer. The projecting square bay on the south elevation is one character-defining feature indicative of the Sheridan model. The Sears house at 504 South Highland Street is the “Starlight,” originally priced between \$543 and \$1,645. This highly popular model was available between 1913 and 1933. Set on a rock-faced concrete-block foundation, the bungalow is clad in weatherboard siding and covered by a hipped roof. The roof has overhanging eaves and a clipped gable dormer. The roof extends over the façade to shelter an inset full-width porch with Tuscan columns.

As the two Sears houses in Arlington Heights indicate, the Craftsman style was popular in the early twentieth century. Inspired by the Arts and Crafts movement, the Craftsman style was fashionable throughout the United States from 1905 to 1930. Originating in southern California, this style became the dominant one for smaller dwellings. The Craftsman style stressed exposed structural components while avoiding formal historic precedents. This style is identifiable by several principal characteristics. Craftsman-style dwellings often feature low-pitched front, side, or cross gable roofs as well as low-pitched hipped roofs, overhanging eaves with exposed rafters and decorative braces, full- or partial-width porches with tapered square columns extending either the entire height or resting on pedestals. There are approximately twenty-eight Craftsman-style bungalows located throughout Arlington Heights that were constructed prior to 1935. Illustrative of the Craftsman style is the bungalow at 119 South Garfield Street, constructed circa 1927. This house is set on a rock-faced concrete-block foundation, which was typical of the Craftsman style. Patented in 1900, rock-faced concrete block instantly became one of the leading building materials in the United States. Concrete blocks were a cheap, quick, and easy alternative to more traditional materials, with a block costing between thirteen and twenty cents to make in 1910. One of the most important reasons for the popularity of concrete block was its ornamental possibilities. A combination of changes in both taste and technology in the 1930s led the industry to shift production to the more utilitarian and less decorative plain face block.<sup>2</sup> The dwelling on South Garfield Street is one-and-a-half stories in height and three bays wide. A hipped roof with overhanging eaves and exposed rafters covers the house. Exposed rafters were a typical roofing treatment to create decorative elements on the house. Other examples of Craftsman-style bungalows are 807 South Glebe Road, 700 South Highland Street, 3211 7<sup>th</sup> Street South, 2915 6<sup>th</sup> Street South, 3102 2<sup>nd</sup> Street South, 126 South Irving Street, and 102 South Garfield Street.

---

**CONTINUED DEVELOPMENT OF ARLINGTON HEIGHTS: 1936-1945**

Continuing subdivision platting coupled with a surge in residential construction between 1936 and 1941 spurred the construction of numerous brick Colonial Revival-style buildings throughout the neighborhood. The Colonial Revival style, the most popular architectural style in Arlington Heights after 1935, making up well over 70 percent of the building stock, was adapted to meet the housing needs of many suburban neighborhoods in Arlington County in the middle part of the twentieth century. Consequently, the larger high-style dwellings of the past were reduced to two- and three-bay rectangular structures with projecting porticos, cornice returns, open pediments, and Tuscan columns. Other features of the suburban Colonial Revival style include stretcher or rowlock belt courses, sill courses and water tables, segmental-arched lintels, door surrounds with either broken, open, or brick pediments, denticulated cornices, and fluted or flush pilasters.

**SINGLE DWELLINGS**

Although eight distinct subdivisions were platted between 1936 and 1945, the single dwellings that were constructed are architecturally consistent and compatible throughout the neighborhood. In 1936, C. D. Burger constructed fifteen dwellings in the Robert R. Dye subdivision, originally part of Ashton Heights. These houses are designed in simplified Colonial Revival and Dutch Colonial Revival styles. The two-story, three-bay dwellings were originally clad in a stone veneer on the first stories and weatherboard siding on the second stories. The house at 3414 Arlington Boulevard exhibits the restrained and simplified Colonial Revival style of this period. It features symmetrical fenestration and a door surround with fluted pilasters and an entablature. Houses like those at 3410 and 3402 Arlington Boulevard have undergone alterations and additions that are compatible with the Colonial Revival style. The dwelling at 3410 Arlington Boulevard, for example, has a one-story front-gabled portico addition with Tuscan posts framing the entrance. A full-height front-gabled portico addition is located on the house at 3402 Arlington Boulevard, augmenting its original Colonial Revival-style detailing. Burger also constructed dwellings in the Dutch Colonial Revival style along Arlington Boulevard. The dwellings at 3420 and 3506 Arlington Boulevard are designed in the Dutch Colonial Revival style with symmetrical fenestration. The houses have prominent gambrel roofs, which signify the Dutch Colonial Revival style.

A portion of Offutt's addition to Lyon Park, platted in 1937, became the northeastern portion of Arlington Heights, bounded by Arlington Boulevard to the north and South Fillmore Street to the east. Lots were platted on both the east and west sides of South Fenwick Street upon which George W. Offutt III constructed Colonial Revival-style freestanding single dwellings from 1937 to 1939. South Fenwick Street features many of Offutt's one-and-one-half-story, three-bay dwellings with Cape Cod forms and minimal Colonial Revival-style detailing. The dwellings are either wood-frame or concrete-block construction clad in six-course Flemish-bond brick or stone veneer. The Cape Cod houses, such as those located at 116 and 117 South Fenwick Street, have symmetrical fenestration but lack door surrounds indicative of the Colonial Revival style. Several dwellings have one-story front-gabled portico additions with Tuscan posts, thus creating a stronger reference to the Colonial Revival style. The Cape Cod dwelling at 113 South Fenwick illustrates this trend with the construction of a front-gabled portico with Tuscan posts.

Three subdivision plats in the central portion of Arlington Heights occurred between 1937 and 1938. In 1937, the Vaughn and Usilton subdivision was bounded by 2<sup>nd</sup> Street South to the north, South Glebe Road to the west, 5<sup>th</sup> Street South to the

Arlington, Virginia**

**Section**   7   **Page**   6  

---

---

south, and South Highland Street to the east. M. E. Spink platted a subdivision in 1937 that was bounded on the north by 6<sup>th</sup> Street South, South Highland Street to the east, 7<sup>th</sup> Street South on the south, and South Glebe Road to the west. The Virginia Park subdivision of 1939 created more lots for development. Virginia Park was sited between 2<sup>nd</sup> Street South to the north, 6<sup>th</sup> Street South to the south, and South Highland Street to the west. Multiple builders constructed freestanding single dwellings throughout these newly platted sections of Arlington Heights. The builders involved with this new construction were Vaughn and Usilton, Behm and Berger Company, Inc., C. W. Gosnell, Carlos Flower, Roy S. Parson, and Adelman and Wolf. These builders constructed single dwellings following the same forms and minimal detailing found throughout the neighborhood. The new construction introduced, however, one new form to Arlington Heights: the two-story, two-bay, Colonial Revival-style single dwelling. Constructed of concrete-block, the single dwelling at 3232 6<sup>th</sup> Street South is two stories in height and two bays in width. It is covered by a hipped roof and clad in six-course American-bond brick. The symmetrical fenestration features a single-leaf door surrounded by fluted pilasters and an entablature. The dwelling at 3317 6<sup>th</sup> Street South features slight variations, such as a side gable roof and a door surround characterized by a broken pediment with dentils and fluted pilasters.

TWIN DWELLINGS

Joseph and Anthony Gaddy constructed eleven semi-detached twin dwellings in 1938 and 1940 in the Glebe Manor subdivision. Glebe Manor is the portion of Arlington Heights located in the triangular section of land between Old Glebe Road and South Glebe Road south of Arlington Boulevard. The twin dwellings were located along the north and south sides of 1<sup>st</sup> Road South and all exhibit simplified Colonial Revival-style detailing. Examples of these twin dwellings are located at 3621-3623, 3609-3611, and 3608-3610 1<sup>st</sup> Road South. Constructed of concrete blocks, the two-story, four-bay twin dwellings are faced with six-course American-bond brick. Although the dwellings have minimal ornamentation, the symmetrical fenestration and one-story porticos allude to the Colonial Revival style. Entrances to the units are located in the central bays, which are flanked by double-hung sash windows with rowlock sills on the first and second stories. Front-gabled porticos with arched undersides and Tuscan columns frame the entrances. Some porticos have been altered since originally constructed; for instance, the entrance to 3608 1<sup>st</sup> Road South has been enclosed and clad in aluminum siding. Alterations also occurred at 3609-3611 1<sup>st</sup> Road South, where one portico has lattice siding and the other has eight-light sidelights.

Mace Properties, Inc. constructed 91 semi-detached twin dwellings during 1938 and 1939 in the Westmont subdivision of Arlington Heights. Westmont was bounded by 8<sup>th</sup> Street to the north, South Highland Street on the west, Columbia Pike to the south, and South Glebe Road on the east. This low-cost housing development, approved by the Federal Housing Administration (FHA), brought quality housing within reach of those in lower-income brackets. Architect Adolph F. Thelander designed three variations for Mace's semi-detached Colonial Revival-style twin dwellings. The two-story, four-bay buildings have either flat roofs with metal coping, side gable roofs, or hipped roofs. All dwellings are concrete-block construction with six-course American-bond brick veneers. Brickwork provides additional variety; some dwellings have brick quoins, soldier stringcourses, rowlock sill courses, rowlock lintel courses, denticulated header stringcourses, and/or dogtooth stringcourses. Symmetrical fenestration in the form of double-hung sash windows and centered entrances characterize all the Mace dwellings. Thelander also designed a variety of porches. The building at 843-845 South Glebe Road features a single shed hood with supportive knee braces over both entrances. At 846-848 South Irving Street, the twin dwelling has a one-story, two-bay, shared shed-roofed portico with wood posts framing both entrances. Yet another

variation is illustrated at 827-829 South Ivy Street where the two entrances are covered by a single one-story, two-bay, half-hipped portico.

GARDEN-APARTMENT COMPLEX

“Between 1935 and 1942 more than three hundred garden apartment complexes were built in Washington and its suburbs, constituting one of the most important collections of this type of apartment house in the United States.”<sup>3</sup> Garden apartments stress a non-urban setting and avoid street frontage, orienting buildings toward a central courtyard. These apartments offered improved air circulation, agreeable views, and better light in each apartment. A focus of apartment construction between 1934 and 1954 was the need to construct affordable, cost-efficient, permanent, and attractive housing.<sup>4</sup> Between 1941 and 1942 Russel Scheele and E. M. Willis and Sons constructed Highland Hall (present-day Arbors of Arlington), a garden-apartment complex on Old Glebe Road. Built on a smaller scale than other garden-apartment complexes in Arlington County, Highland Hall consists of five three-story buildings, each with a central entrance, no lobby, and no elevators. The buildings are arranged in a landscaped setting facing a central courtyard.

Highland Hall buildings, located at 20, 22, 24, 26, and 30 Old Glebe Road, are masonry construction clad in six-course American-bond brick veneer and sited to face away from South Glebe and Old Glebe roads. The five buildings are all three stories in height with exposed basements, originally providing 114 units. Scheele and E. M. Willis and Sons designed the complex in a simplified and modern Colonial Revival style, a style illustrated by most garden-apartment complexes in Arlington and nationwide initially. Covered by flat roofs with parapets, the apartments feature flat friezes and cavetto-profiled concrete cornices. The buildings have brick quoins, double-hung windows on rowlock sills, and concrete stringcourses. Set at diagonals and enclosed with modern materials like glass block, the entrances face a landscaped courtyard with concrete pathways, benches, and mature trees and shrubs. The use of glass block, a modern material, signaled the beginning of a shift from the Colonial Revival style to the Modern Movement. Although the siting, massing, symmetry, form, and ornamentation of the complex is distinctly Colonial Revival in style, the detailing is visibly influenced by the Moderne style, which is characterized by minimal applied ornamentation and the use of modern building materials. Paved parking is located to the rear of the buildings along South Glebe Road, serving as an additional buffer to street frontage.

**POST-WAR ARLINGTON HEIGHTS: 1946-1957**

With the end of World War II, subdivision platting and construction of new residential buildings resumed. Flower’s Addition in 1945, Caron’s Addition in 1948, Bernstein and Reinsch’s Addition in 1950, and Cook’s Addition of 1950 subdivided the remaining unimproved land in Arlington Heights. The pace of construction accelerated in 1950 when freestanding single dwellings were constructed block-by-block on South Fenwick Street by Flower Properties, South Hudson Street by Bernstein and Reinsch, and South Jackson Street by Northeastern Builders. The majority of these new dwellings continued to exhibit the Colonial Revival style with minimal detailing.

RANCH HOUSES

**Section**   7   **Page**   8  

---

---

Flower Properties constructed a block of ranch houses on South Fenwick Street. The one-story, three-bay dwellings are concrete-block construction with stretcher-bond, six-course American-bond, or six-course Flemish-bond brick veneers. The ranch houses feature interior chimneys of stretcher-bond brick construction. Original windows on these houses consist of double-hung, metal-sash windows and metal-framed picture windows, openings that suggest the interior floor plan. Covered by a cross gable roof clad in asphalt shingles, the ranch house at 305 South Fenwick Street features overhanging eaves. Other details include a recessed entry bay and double-hung, metal-sash windows with rowlock sills. Other examples of ranch houses in Arlington Heights include 400 South Fenwick Street, 312 South Fenwick Street, and 410 South Fenwick Street.

These ranch houses demonstrate the changing trends in house designs due to a shift in consumer preferences and increasing incomes during the 1950s. The ranch house developed as a residential house type in the 1930s as California architects adapted traditional housing of Southwest ranches into a suburban house type for middle-income families. Typically, ranch houses are one story and horizontal in form with low-pitched roofs and an open floor plan. Considered a modern alternative to the traditional Colonial Revival-style houses promoted by the FHA, many developers used the basic floor plans approved by the FHA and transformed the facades to have a modern ranch house appearance. As a result of the ranch house's popularity, "[p]icture windows, broad chimneys, horizontal bands of windows, basement recreation rooms, and exterior terraces or patios became distinguishing features of the forward-looking yet lower-cost suburban home."<sup>5</sup> In keeping with these nationwide trends, Flower Properties constructed fifteen ranch houses along South Fenwick Street in Arlington Heights.

OTHER SINGLE DWELLINGS

Arlington Heights features one Lustron house, which is located at 2915 7<sup>th</sup> Street South. Designed as low-cost prefabricated housing, Lustron houses could be built quickly and were intended to alleviate the demand for affordable and modern post-war housing. The Lustron house form is one story in height and three bays in width and resembles the ranch house. Set on concrete slabs, the Lustron houses have an interior and exterior skin of enameled steel panels bolted to structural-steel framing.<sup>6</sup> The dwelling at 2915 7<sup>th</sup> Street South was assembled in 1949 and features dove-gray porcelain-enameled panels. The house retains its original one-story, three-bay, side gable-roofed form. The roof is clad in molded metal panels simulating ceramic tiles. The dwelling has undergone only slight alteration with a carport addition.

In 1951, E.G. Reinsch constructed two-story, three-bay, Colonial Revival-style single dwellings along South Irving and Highland streets between 7<sup>th</sup> and 8<sup>th</sup> streets South. Typical of earlier dwellings constructed in the neighborhood, these houses had Colonial Revival door surrounds with fluted pilasters, entablatures, pediments, broken pediments, side gable roofs, and double-hung windows with rowlock sills. The single dwellings at 808 South Irving Street, 717 South Ivy Street, and 716 South Highland Street exhibit the screened-in side porch offered on these dwellings, the majority of which have been enclosed with aluminum or vinyl siding.

RELIGIOUS BUILDING

In addition to the domestic buildings throughout Arlington Heights, there is also a religious building at 2920 Arlington

---

Boulevard. Constructed in 1947 by Victor R. Beauchamp, the Arlington Jewish Center, which houses the only synagogue in Arlington County, is concrete-block construction with a six-course Flemish-bond brick veneer and a beveled concrete watertable. The two-story, three-bay synagogue is illustrative of the Modern Movement through its roof pitch, angular entrance vestibule, and fenestration. The Jewish Center is covered by a shallow-pitched front gable roof clad with asphalt shingles. The roof has overhanging eaves and a plain frieze board. The double-leaf entry door, located within a projecting two-story entry vestibule, has an eight-light transom and three-light sidelights. The windows are one-light metal casements and one-light metal hopper windows capped by three-light fixed metal windows. The windows have header sills. The exposed basement has six-over-six double-hung, wood-sash windows. A curved bay supported by concrete posts is located on the east elevation.

COMMERCIAL BUILDING

One commercial building is located within the Arlington Heights Historic District. Sited south of the Dominion Arms apartment building, the one-story, seven-bay commercial building is set on a solid concrete foundation and houses one store. Constructed in 1953, the building is concrete block with a six-course American-bond brick veneer and stucco. A flat roof with a parapet covers the building, which is fenestrated with fixed metal storefront windows and a double-leaf entry with a one-light transom. A pent roof runs along the west and south elevations.

HIGH-RISE APARTMENT BUILDING

Constructed in 1954, the Dominion Arms is the only high-rise apartment building in Arlington Heights and one of the few constructed outside the Metro corridor that runs from Rosslyn to Ballston/Virginia Square. High-rise apartment buildings are at least seven stories in height, contain a minimum of twenty units, and feature a single public entrance. High-rise apartments constructed in Arlington County between 1950 and 1954 were intended to provide moderate-income housing for veterans and government workers.<sup>7</sup> Located at 333 South Glebe Road, the seven-story apartment building was constructed with 188 units. It is concrete-block construction clad in six-course American-bond brick veneer. The building alludes to the International style with its stress on functionalism and rejection of nonessential ornamentation. A flat roof with concrete coping covers the building. A pent roof runs along the first story. The double-leaf door is set within a shed-roofed portico supported by concrete columns. The one-light metal casement windows flank the large picture windows, which have one-light transoms. The windows have concrete sill and lintel courses. The first story of the building is used for commercial purposes and is clad with concrete panels. The commercial spaces are each two bays in width with single-leaf doors and fixed storefront window. The building now offers 208 apartments and seven commercial spaces. The property also features a pool, pool house, and storage shed located behind the building in the southeast corner of the property.

ARLINGTON HEIGHTS AFTER 1957

Arlington Heights experienced little construction after the middle of the twentieth century as residential buildings had improved most of the interior lots by that time. The few remaining unimproved lots were re-subdivided in 1963 and 1978 and have subsequently been improved in the last quarter of the twentieth century with single-family dwellings. For the

Arlington, Virginia**

**Section**   7   **Page**  10 

---

---

most part, these houses are compatible with the historic housing stock throughout Arlington Heights in terms of their form, style, and materials. One of the more recent dwellings compatible to its neighboring building stock is 5 South Garfield Street, which was constructed circa 2005. This dwelling features a two-story, three-bay Colonial Revival form. It is wood-frame construction clad in a stretcher-bond brick veneer with a stone stringcourse. The hipped roof has overhanging eaves and a plain frieze. The dwelling features a projecting front gable bay with a Palladian window. The centered entrance has one-light sidelights and is adorned by a fanlight. Other examples of compatible non-historic Colonial Revival-style single dwellings are 607 South Ivy Street, 605 South Glebe Road, and 609 South Glebe Road.

RANCH HOUSES

Constructed between 1963 and 1968, the ranch houses on the 600 block of South Ivy Street differ from those constructed along South Fenwick Street during the 1950s. These dwellings, set on solid concrete foundations, are concrete-block construction clad in six-course Flemish-bond brick. The one-story, four-bay houses are covered by hipped roofs with overhanging eaves. Large, exterior-front chimneys are common features that break-up the horizontality of these ranch houses. The dwelling at 626 South Ivy Street maintains its original two-over-two double-hung, wood-sash windows with rowlock sills, while most of the other ranch houses in the South Ivy Street cul-de-sac have one-over-one double-hung, vinyl-sash replacement widows.

PARSONAGE

The construction permit, issued in 1981, indicates the property at 607 South Ivy Street was intended as a parsonage for the EME Church; however, no record of an EME Church was located in Arlington County archives. The Arlington United Methodist Church is the closest house of worship and has served the Arlington Heights community for over one hundred and fifty years. Current tax records indicate the building is used as a single dwelling but is no longer owned by a church. Set on a solid foundation, the two-story, five-bay building is constructed of concrete blocks and clad in a stretcher-bond brick veneer. Like earlier single dwellings in Arlington Heights, the parsonage refers to the Colonial Revival style in both its form and fenestration although it displays minimal ornamentation. The building features symmetrical fenestration with double-hung, wood-sash windows on rowlock sills and a single-leaf entry with a Colonial Revival door surround. The door surround has fluted pilasters and a broken pediment.

MIDDLE SCHOOL AND COMMUNITY CENTER

Constructed circa 1972, the Thomas Jefferson Middle School and Community Center is a facility cooperatively run by the Arlington school and county administrations. Located at 125 South Old Glebe Road, the school is sited on the northeast corner of South Old Glebe Road and 2<sup>nd</sup> Street South. The one-story school, set on a concrete foundation, occupies the western portion of this lot and is fronted by a paved parking lot. The school is concrete-block construction clad in stretcher-bond brick. It is covered by a flat roof with metal coping and features six projecting two-story concrete bays. The bays have hipped roofs clad in standing-seam metal. The building is fenestrated with one-over-one double-hung, metal-sash windows as well as double- and triple-leaf metal doors. The middle school/community center is designed in a Moderne style that places an emphasis on materials and modern construction techniques and does not stylistically allude to historical precedents. A landscaped park is located on the eastern portion of this lot. The park is part of the community

---

---

recreation center and features a baseball field, soccer field, basketball court, and tennis court. The park is enclosed with a chain-link fence and perimeter plantings.

ARLINGTON HEIGHTS PARK

Bounded by 9<sup>th</sup> Street South on the south and by South Irving Street on the west, Arlington Heights Park is a triangular-shaped, landscaped park. The park is the only green space in the neighborhood not associated with the school and its countywide community center.<sup>8</sup> Located on 0.25 acres at the intersection of 9<sup>th</sup> Street South and South Irving Street, the small park is classified by the Arlington County Department of Parks, Recreation and Cultural Resources as a “passive park in a residential setting.”<sup>9</sup> A survey of *Franklin Survey Maps of Arlington County* indicates the park was established between 1947 and 1952. The *1952 Franklin Survey Map of Arlington County* shows the park for the first time.<sup>10</sup> The park received its present-day name in 1999 when another park in Arlington County, located at 2200 6<sup>th</sup> Street South, changed its name from Arlington Heights Park to Fort Craig Park. The original name of Arlington Heights Park is unknown. A diagonal sidewalk running northeast between 9<sup>th</sup> Street South and South Irving Street forms a physical boundary for the park. The site is level and features mature trees and shrubs. Landscaping includes three benches, a picnic table, and a water fountain clad in stone veneer.

SECONDARY RESOURCES

The secondary resources in the Arlington Heights Historic District consist of garages and storage sheds that are generally located at the rear of the property. Garages in Arlington Heights were typically constructed at the time or shortly after the houses were built. Characteristically, the garages are one-story high and one-bay wide with a concrete foundation, wood-frame construction, and they have a front-gabled roof of asphalt shingles. The garages are generally located to the rear of the house, along a side elevation, and are accessible by a paved driveway. Many of the garages have been re-clad in vinyl or aluminum siding or in asbestos shingles, while a small number exhibit the original weatherboard siding or brick veneer. The garages are primarily fenestrated by multi-paned roll-up or double-leaf hinged wood doors. Storage sheds in Arlington Heights are also characteristically one-story high, one-bay wide, and constructed of wood framing. The buildings have gabled or shed roofs and single- or double-leaf doors. A large number of wood and metal prefabricated storage sheds are also located to the rear of the properties.

INTEGRITY

Many of the dwellings along Arlington Boulevard have had their second stories re-clad in aluminum or vinyl siding. Aluminum siding was developed before vinyl siding and was used in the re-cladding of a small number of houses in Arlington Heights as early as the 1960s and 1970s. Although the manufacturing of aluminum began in the 1880s, it was not until the 1920s that ALCOA (Aluminum Company of America) began promoting its use for architectural elements. In 1937, Indiana machinist Frank Hoess began experimenting with steel siding that imitated wood weatherboard siding. After receiving a patent in 1939, Hoess joined forces with Metal Building Products of Detroit and marketed siding made of ALCOA aluminum. This new product could be nailed to existing siding or attached directly to studs.<sup>11</sup> Vinyl siding was introduced as a home-improvement product by ALCOA in the 1960s. Initially, the manufacturing process that produced

**United States Department of the Interior  
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET**

**Arlington Heights Historic District  
Arlington, Virginia**

Section 7 Page 12

vinyl siding made it difficult to manufacture the product quickly and to control the final shape. However, after the industry improved its manufacturing techniques during the 1970s and 1980s, production increased dramatically. Not only was the product produced faster, but it was more durable and was offered in a larger range of colors than aluminum siding.<sup>12</sup> Since 1986, the use of vinyl nationwide has doubled, surpassing the use of aluminum siding and reaching 2.2 billion square feet in 1992.<sup>13</sup> While the use of aluminum and vinyl siding affects the integrity of individual buildings, it has little effect on the overall architectural integrity of the district.

Additions and alterations, like the use of replacement materials, are common throughout Arlington Heights. In general, these changes do not diminish the overall integrity of the historic district, or the integrity of most of the individual buildings. When the additions substantially altered the original form, scale, and fenestration of the building, it is noted as non-contributing. Typically, the additions and alterations are sensitive to the original design, workmanship, materials, and feeling of contemporaneous buildings located in Arlington Heights, while often ensuring the integrity of the main block. A small number of teardowns and new construction have occurred in the neighborhood around the turn of the twenty-first century. The new construction attempts to be compatible with the existing architectural styles and forms found throughout the neighborhood; thus, additions, alterations, and new construction have not affected the integrity of Arlington Heights as a whole.

**ARLINGTON HEIGHTS HISTORIC DISTRICT INVENTORY REPORT**

Contributing status is based on the Period of Significance, Areas of Significance, and integrity of each resource at the time of this survey.

**1st Road South**

**3600-3602 1st Road South 000-3383-0034**

*Primary Resource Information: Multiple Dwelling, Stories 2.00, Style: Colonial Revival, 1938*

(September 2006) Set on a solid foundation, this two-story, four-bay twin dwelling is designed in the Colonial Revival style. The dwelling has a rectangular form. It is constructed of 6-course American-bond brick and has two exterior-end chimneys of stretcher-bond brick construction. Fenestration on 3600 1st Road South consists of 1/1 double-hung wood-sash windows with rowlock sills. Fenestration on 3602 1st Road South consists of 6/6 double-hung wood-sash windows with rowlock sills. There are two one-story, one-bay porches which frame the single-leaf entry doors. A front-gabled roof supported by metal filigree posts covers the porch on 3600 1st Road South. The porch on 3602 1st Road South is covered by a front-gabled roof, which is supported by wood posts. A side-gabled roof clad in asphalt shingles covers the dwelling. There is a two-story extension on the rear (south) elevation. The materials and fenestration are consistent with the main block. A flat roof with parapet covers the extension. There is a one-story, two-bay porch on the rear (south) elevation of the addition. A shed roof supported by metal filigree posts covers the porch.

(September 2006) This one-and-a-half-story, three-bay, wood-frame house has a square plan and cubic proportions with a full-width, one-story, hipped roof porch at the front. A prominent, hipped-roof dormer crowns the front roof plane. The side-hall entrance is embellished by a 2-light transom and the windows have wooden sills and lintels. The porch is supported on attenuated Tuscan-style columns. There is a one-story, one-bay, front gable addition off of the center rear elevation. A one-story, gable-roof frame addition extends off the rear. The exterior has been re-clad with asbestos shingles.

(September 2006) Set on a solid foundation, the two-story, five-bay single dwelling is designed in the Colonial Revival-style. It has a rectangular-block plan. It is wood-frame construction with stretcher-bond brick veneer on the façade and weatherboard siding on the other elevations. Fenestration consists of 9/9 double-hung metal-sash windows on the first-story and 6/6 double-hung metal-sash windows on the second-story. All windows on the facade have rowlock sills. The first-story windows have brick lintels with a concrete keystone. A one story, one-bay vestibule frames the entry door, which is a single-leaf paneled wood door with a 5-light transom. The door is flanked by 3-light sidelights. The vestibule has a Colonial Revival-style surround featuring fluted pilasters and a pediment. The dwelling is covered by a hipped-roof with overhanging eaves, wood cornice, and dentils. The roof is clad in asphalt shingles.

(September 2006) This one-and-a-half-story, side-gambrel-roof, frame house features flared eaves, exposed, decorative rafter ends, a Classically-inspired entry hood set on open wood brackets, and 1/1 double-hung vinyl-sash windows in the upper story. A shed dormer occupies the entire length of the façade. A one-story, one-bay frame "sun-room" wing extends from the east end of the house, matched by a porte cochere with decorative cut rafter ends on the west. A rear two-story addition raises the roof line with fenestration and materials consistent with the main block.

(September 2006) This house consists of a two-story, front gable rectangular block with a two-bay, one-story, wrap-around porch on the northeast corner. The facade is two-bays wide with a side-hall entry. A single bay in the second-story facade contains paired sash windows. A 1-story, side-gable, 2-car garage addition was built on the west elevation. The house has been re-clad and many of the original windows replaced.

(September 2006) The house was originally a one-and-a-half-story, front-gable, wood-frame structure. The original full-width, hipped-roof porch remains. The porch is supported on Craftsman-style columns consisting of rock-faced concrete-block piers surmounted by tapered wood columns. The foundation consists of rock-faced concrete-blocks. An additional story has been added to the house, making it a full, 2-story, front-gable structure. The original siding has been replaced as have the windows and the front door. A 1-story frame addition was appended to the rear, and the chimney extended to accommodate the additional story.

(September 2006) Set on a solid foundation, the two-story, two-bay single dwelling is designed in the Dutch Colonial Revival style. The dwelling has a rectangular-block form. It is constructed of 6-course American-bond brick and has an exterior-end chimney of stretcher-bond brick. The chimney has a corbelled cap. Fenestration consists of 8/1 double-hung metal-sash windows with rowlock sills. There is a shed-roofed dormer on the façade. The single-leaf paneled with lights wood entry door has a wood surround. The dwelling is covered by a gambrel roof with plain fascia and overhanging eaves. The roof is clad in asphalt shingles. The roof eaves overhang on the façade to form a one-story, two-bay porch. The porch is supported by Tuscan wood columns on brick piers. There is a one-story addition on the rear elevation with materials and fenestration that are consistent with the main block. The addition is covered by a shed roof.

(September 2006) Set on a solid foundation, this two-story, four-bay twin dwelling is designed in the Colonial Revival style. The dwelling has a rectangular form. It is constructed of 6-course American-bond brick and has two exterior-end chimneys of stretcher-bond brick construction. Fenestration consists of 6/6 and 8/8 double-hung wood-sash windows with rowlock sills. There are two one-story, one-bay porches which frame the single-leaf wood entry doors of 123 and 125 S. Glebe Road. The porches are covered by a front-gabled roof which is supported by wood brackets. A side-gabled roof clad in asphalt shingles covers the dwelling. The dwelling has a two-story rear extension with a flat roof. There is a two-story addition on the rear elevation. The addition is stretcher-bond brick construction. Fenestration consists of 2/2 double-hung vinyl-sash windows. A shed roof covers the addition.

(September 2006) Set on a solid foundation, the two-story, three-bay single dwelling is designed in the Colonial Revival style with a rectangular plan. It is masonry construction of 6-course American-bond brick. The exterior-end chimney is constructed of stretcher-bond brick and has a corbelled cap. The dwelling is covered by a side gable roof with overhanging eaves which is clad in asphalt shingles. The single-leaf paneled with lights wood door has a square wood surround. Fenestration consists of 6/1 double-hung wood-sash windows with rowlock sills. The second story of the facade retains its original louvered wood shutters. There is a one-story, two-bay porch on the façade. The porch has a flat roof with an ogee-profiled frieze board. The flat roof is supported by brick posts and has a walkout balcony. The balcony and the porch both have turned metal balustrades. There is a two-story addition of 6-course American-bond brick construction on the rear elevation. The addition is covered by a front gable roof and has 6/1 double-hung wood-sash windows. The northern portion of rear elevation has a one-story porch addition. The porch has a shed roof supported by wood posts.

(September 2006) Set on a solid foundation, the two-story, three-bay single dwelling is designed in the Colonial Revival style with a rectangular plan. It is masonry construction of 6-course American-bond brick and has an exterior-end brick chimney constructed of stretcher-bond brick with a corbelled cap. A side gable roof clad in asphalt shingles covers the dwelling. The roof has a plain fascia board. The single-leaf paneled wood door has a Colonial Revival-style surround with pilasters. Fenestration consists of 8/8 double-hung metal-sash windows, with rowlock sills, and louvered shutters. The one-story screened-in porch located on the south elevation has been altered on the eastern portion to one-and-a-half-stories. The alteration creates a semi-monitor roof with a ribbon of 1-light metal casement windows. The porch is clad in stucco on the side elevations and features 1-light metal casement windows.

(September 2006) Set on a solid foundation, the two-story, three-bay single dwelling is designed in the Colonial Revival style with a rectangular plan. It is masonry construction of 6-course American-bond brick. The dwelling has an exterior-end chimney of stretcher-bond brick construction with a corbelled cap. It is covered by a side gable roof clad in asphalt shingles. The roof has overhanging eaves and a plain fascia. The single-leaf wood door has a Colonial Revival-style surround with fluted pilasters and a denticulated cornice. Fenestration consists of 1/1 double-hung vinyl-sash replacement windows on the first story, 8/8 double-hung vinyl-sash replacement windows on the second story, rowlock sills, square wood surrounds, and louvered shutters. A one-story, one-bay screened-in porch is located on the south elevation. A shed roof covers the porch. It has been enclosed and is clad in T-111 siding. Fenestration consists of paired 6/6 double-hung vinyl-sash windows.

(September 2006) Set on a solid foundation, the one-story, three-bay single dwelling is designed in the Colonial Revival style. It has a ranch form. It is masonry construction of 6-course American-bond brick with an exterior-end chimney of stretcher-bond brick. The chimney has a corbelled cap. Fenestration consists of 8/8 double-hung wood-sash windows with rowlock sills. On the first-story is a canted-bay window of 1-light vinyl-sash casement windows flanked by 4/4 double-hung vinyl-sash windows. A one-story, one-bay recessed brick porch frames the single-leaf paneled with lights wood door. Brick posts support the porch. A side-gabled roof with a projecting front gable covers the dwelling. Both rooflines have overhanging eaves and are clad in asphalt shingles. There is a torus-profile frieze. There is a one-story addition on the west elevation. It is covered by a flat roof and has consistent materials as the main block.

(September 2006) Set on a solid foundation, the one-story school is designed in a Moderne style. It is constructed with stretcher-bond brick. A flat roof with metal coping covers the main block of the school/community center building. A one-story, flat-roofed extension is located on the east elevation of the main block. Portions of the roof along the façade of the main block as well as the north, and south elevations of the extension have shed roofs. Six projecting, two-story concrete towers are located along the north, east, and south elevation of the flat-roofed extension. Hipped roofs clad in standing-seam metal cover the towers. The north elevation of the main block has a canted wing with a flat roof. The northernmost bay of the canted wing has a squared, three-story bay with a one-story, half-hipped projection. Fenestration consist of 1/1 double-hung metal-sash windows. The double-leaf and triple-leaf metal doors are located within recessed entries.

**STATEMENT OF SIGNIFICANCE**

The Arlington Heights Historic District in Arlington County, Virginia, is significant as a residential commuter suburb of Washington, D.C. The growth of this historic community is tied to the arrival of the commuter railways, buses, and automobiles during the early twentieth century as well as the housing needs of government employees. Developed between 1909 and 1978, Arlington Heights was the product of twenty-five subdivisions and more than thirty builders. Initially an unplanned community, from the mid-1930s through the late 1950s the neighborhood transitioned to planned development. The buildings constructed throughout the neighborhood, especially after 1935, are remarkably consistent architecturally; however, the neighborhood simultaneously exhibits a wider variety of building forms, types, and styles than the surrounding neighborhoods of Ashton Heights, Lyon Park, and Penrose. Arlington Heights, comprised of white middle-class families, was home to many Washington D.C. residents looking to move out of the nation's capital. It became a convenient locale for many federal government workers due to the availability of public transportation to and from the nation's capital. Major transportation and commercial corridors continue to surround Arlington Heights. The neighborhood retains a substantial number of early- to mid-twentieth century dwellings and apartment buildings representing popular styles and forms including the Bungalow/Craftsman, Cape Cod, Colonial Revival, American Foursquare, Tudor Revival, International, and Modern Movement. Arlington Heights is home to the only synagogue, one of only two high-rise apartment buildings, and one of eleven Lustron houses constructed in Arlington County. Educational, recreational, and commercial buildings, as well as two landscaped parks, enhance the residential community.

Arlington Heights meets National Register Criterion C and is significant under the themes of architecture and community planning as historic suburban development with the period of significance extending from 1909 to 1957 (due to the subdivision and development continuing until 1978). Arlington Heights is being nominated under the Multiple Property Nominations, *Garden Apartments, Apartment Houses and Apartment Complexes in Arlington County, Virginia: 1934-1954* (EHT Tracerics, 2002) and *Historic Residential Suburbs in the United States, 1830-1960* (National Park Service, 2002). The neighborhood consists of 610 properties with over 900 resources, including single and multiple dwellings, one commercial building, one middle school/community center, one religious facility, two parks.

**CRITERION C: COMMUNITY PLANNING AND SUBURBAN DEVELOPMENT**

Arlington Heights meets Criterion C of the National Register of Historic Places as a commuter community that developed to support the expanding middle-class suburban population of Washington, D.C. during the first half of the twentieth century. The Washington and Old Dominion Electric Railway, which ran from Rosslyn to Fairfax, traveled parallel along the road that became Fairfax Drive. The railway originally served this commuting suburb, which is located south of present-day Arlington Boulevard and the neighboring communities of Lyon Park and Ashton Heights. Bus lines were another vital component of Arlington Height's growth as a commuting suburb. Prior to 1924, four bus lines served Arlington and Fairfax counties as well as the City of Alexandria. These lines quickly went out of business and, in 1924, the Alexandria, Barcroft, and Washington Rapid Transit line, owned by Robert L. May, opened.<sup>1</sup> The Barcroft-Washington line ran along Columbia Pike and served the growing Arlington Heights community and neighboring Penrose.

---

---

The increasing acceptance of the automobile and the need for efficient transportation routes into the District of Columbia spurred the 1932 construction of the Memorial Bridge, the opening of the George Washington Memorial Highway, and the ultimate demise of the railway.<sup>2</sup> By 1925, Lee Boulevard (present-day Arlington Boulevard) was widened to 200 feet in order to accommodate the increasing automobile and bus traffic.<sup>3</sup> Surrounded by major automobile thoroughfares, Arlington Heights was firmly established as a commuting suburb of Washington, D.C. by the mid-1950s.

As Arlington Heights transformed into a commuting suburb, it simultaneously transitioned from an unplanned to a planned community. Traditionally a farming area, the early community was substantially rural with scattered development. The first decades of the twentieth century are characterized by low-density development along a few newly platted streets. Although developed independently by numerous developers and builders, the Federal Housing Administration's (FHA) principles for neighborhood planning had a unifying influence on the growth of this community. The FHA encouraged large-scale development under the direction of an "operative builder" who would arrange to purchase land for the design of the subdivision plat and for the design and construction of houses. The FHA set forth requirements for new subdivisions: the location must exhibit an active demand for houses; that location must be a suitable site; the site must be accessible by public transportation with access to schools, employment, and shopping; the development must be compliant with city, county or regional plans and regulations; and the development must guarantee it is a sound financial venture.<sup>4</sup> Development from the mid-1930s through the late 1950s exhibits these FHA requirements for planned communities, transforming Arlington Heights from an unplanned community to a planned community similar to the nearby neighborhoods of Ashton Heights, Lyon Park, and Penrose.

**CRITERION C: DOMESTIC ARCHITECTURE**

The suburban neighborhood of Arlington Heights also meets Criterion C of the National Register of Historic Places for its substantial concentration of domestic architecture from the early- to mid-twentieth century, representing the Colonial Revival, Craftsman, Tudor Revival, and International styles that were popular during the period. Local builders and architects, including Mace Properties, Inc. and Vaughn and Usilton, speculatively built the majority of residences in Arlington Heights. The earliest houses erected within Arlington Heights generally represented the Colonial Revival, Craftsmen, and Tudor Revival styles with bungalow and American Foursquare forms. As the neighborhood continued to grow, Colonial Revival became the prominent style. Most dwellings are set back from the street and were later augmented by sun porches, side wings, and rear ells. Arlington Heights exhibits a wider variety of building forms than the neighboring communities of Ashton Heights, Lyon Park, and Penrose. Arlington Heights features freestanding single dwellings, semi-detached twin dwellings, a high-rise apartment building, a garden-apartment complex, a school and community center, and a synagogue.

Various public works programs operating out of Washington, D.C. during the Great Depression, coupled with an increase in federal employment due to the New Deal programs, followed by the need for an increased work force during World War II, led to a population surge in the nation's capital that spilled over into the suburbs. As the population of Arlington grew, residential construction in Arlington Heights surged during the mid- to late 1930s and again during the early 1950s. House

---

---

sizes and stylistic features began to change in response to a new clientele. Consequently, a substantial number of new houses filled lots within existing subdivision plats, as well as in newly platted additions to the neighborhood. The dwellings were modest with minimal ornamentation constructed mainly by local realty enterprises offering modest Cape Cods and two-story houses with rectangular forms ornamented in a variety of styles, including Colonial Revival and Tudor Revival. Rows of low-income semi-detached twin dwellings were constructed throughout the southern portion of Arlington Heights in order to meet the increased housing demand. Like the freestanding single dwellings, these semi-detached twin dwellings were modest examples of the Colonial Revival style with minimal ornamentation.

In order to meet the needs of the growing suburban population, a garden-apartment complex was constructed during World War II and a high-rise apartment building was constructed shortly after the war. Additional residential development of single dwellings occurred throughout the neighborhood during the 1950s. By the mid-1950s, the majority of land in Arlington Heights was developed. Only two re-subdivisions took place within the Arlington Heights Historic District after 1951: one in 1963 and one in 1978. Facilities located within as well as those adjacent to the boundaries of Arlington Heights have created a self-sufficient community. The neighborhood has a school/community center, a synagogue, and two parks that provide spaces for recreational activities and community events. The Columbia Pike commercial strip, an elementary school, public library/technical center, and a county Department of Human Services center along South Walter Reed Drive, and a Methodist church on South Glebe Road bound the neighborhood. These amenities, although outside the historic district boundaries, create an overall sense of place for Arlington Heights by providing for the social, educational, commercial, and spiritual needs of its residents.

Arlington Heights, along with the neighboring communities of Ashton Heights, Lyon Park, Penrose, Alcova Heights, and Barcroft, document the development of Arlington County during the first and second quarters of the twentieth century. These communities flank the major transportation corridor of Arlington Boulevard on the north and south, while the commercial corridor along Columbia Pike serves the commercial needs of these neighborhoods. The amalgamation of these communities illustrates the growth of Arlington County as a whole, yet Arlington Heights individually reflects the nationwide changes in residential building forms, styles, and materials from the first half of the twentieth century. Unlike its neighboring communities of Alcova Heights, Ashton Heights, Lyon Park, and Penrose, Arlington Heights features a wider variety of building types; Arlington Heights, like Barcroft, began as an unplanned community, which accounts for the wide variety of building types, forms, and styles.

## **HISTORICAL BACKGROUND**

### ARLINGTON COUNTY

Arlington is a twenty-six-square-mile county located in Northern Virginia across the Potomac River from Washington, D.C. Fairfax County to the north and west, the City of Alexandria and Four Mile Run to the south, and the waters of the Potomac River to the east bound the county. The county's association with Washington, D.C. dates back to 1791, when Virginia ceded approximately thirty-one square miles of land now known as Arlington County and the City of Alexandria as part of the site for the nation's capital. Arlington was a small crossroads community with only scattered development

---

---

within the environs at the time of the capital's founding. When Virginia officially ceded the land in 1801, the population of the county was 5,949 with all but 978 people living in Alexandria.<sup>5</sup>

During this period, Arlington became part of the County of Alexandria of the District of Columbia. With the introduction of a circuit court, orphan's court, and levy court, Alexandria became the seat of local government, as well as the commercial and social center for the thirty-one-square-mile area ceded by Virginia. Referred to as the "country part" of the county, Arlington remained rural with strong agricultural interests. Throughout this period, a few large plantations maintained and improved the land. The Alexander-Custis plantation, known as Abingdon, and the George Washington Parke Custis plantation, also known as Arlington Plantation, were the most notable plantations at the time. Small plots held by farmers and tenants primarily comprised the remainder of cultivated land in the county. The population of the Arlington area continued to increase in the early nineteenth century, with the majority of the county's population concentrated in Alexandria. Of the 8,552 who lived in the county in 1810, only 1,325 lived in the rural part of the county. By 1820, the rural population had increased by only 160 persons to 1,485, a small portion of the 9,703 total county residents living outside the town limits.<sup>6</sup>

Following a referendum among its citizens in 1846-1847, Alexandria County, including the city of Alexandria and present-day Arlington County, voted to return to the Commonwealth of Virginia. Alexandria remained the area's center of commerce, trade, and domestic development, spurred on by the construction of canals, railroads, and trading routes. Improved roadways and the railroad further encouraged commercial prosperity by providing the necessary links between farms and commercial centers. The railroads, however, did not cross the river until after the Civil War (1861-1865), when Union forces laid rails along the Long Bridge, which is now the site of the 14<sup>th</sup> Street Bridge.<sup>7</sup>

In the decades leading up to the Civil War, the population of Alexandria County continued to grow, reaching 9,573 residents in 1830. By 1840, the population increased by only 394 residents. Census records show a steady increase from 10,008 in 1850 to 12,652 in 1860. Those living in the rural part of the county in this period remained in the minority, numbering 1,332 residents in 1830 and 1,508 residents in 1840, with a decline to 1,274 residents in 1850.<sup>8</sup> The 1850 census listed most of those employed in rural areas as farmers or laborers, although other professions included teachers, merchants, papermakers, carpenters, millers, shoemakers, clerks, tollgate keepers, blacksmiths, and clergymen. The Civil War and the period of Reconstruction that followed weakened the local government of Arlington, allowing corrupt local politicians to dominate from 1870 to about 1900. It was during this period that the county seat moved from Alexandria City to the site of the present-day Arlington Courthouse. G. M. Hopkins's *Atlas of Fifteen Miles around Washington including the Counties of Fairfax and Alexandria, Virginia*, published in 1879, documented just a handful of commercial establishments and a few blacksmith shops in Arlington.

DEVELOPMENT OF ARLINGTON HEIGHTS: PRIOR TO 1945

Arlington Heights claims the status, according to *Washington Post* reporter Anne Cameron Siegal, of being the oldest named community in Arlington County. In a 2001 article, Siegal states, "Arlington Heights appears on early nineteenth-century maps as a farm included in the Custis family estate that stretched from present-day Arlington Cemetery west to

---

---

Barcroft.”<sup>9</sup> Containing over 1,000 acres, the Custis family estate was also known as Arlington Plantation and had been the home of George Washington Parke Custis and his son-in-law, Robert E. Lee. Arlington Plantation was surrounded by much smaller land tracts. The Arlington Heights neighborhood formed from two of these smaller tracts: Brookdale and Alcova. The Brookdale tract extended south from present-day 5<sup>th</sup> Street North toward present-day Columbia Pike. James Robertson, obtaining a patent for the 432-acre tract in 1724, is the first recorded owner of Brookdale. The Brookdale tract passed through the Pearson and Chapman families before Lieutenant Bushrod Washington Hunter purchased the land in 1851. Lieutenant Hunter’s children inherited the land in 1888 upon his death. Hunter’s daughter Fannie Blow Hunter sold approximately 61 acres of the northern portion of Brookdale to Ashton C. Jones in 1919. Ashton Jones was the principal developer of this area, known as Ashton Heights.<sup>10</sup> Ashton Jones, born in 1878, came from a large family in Lunenburg County, Virginia. In 1909, Jones moved to Clarendon after marrying Margaret Rucker. Persuaded by his brother-in-law, George H. Rucker, to work in real estate with him, Jones joined Rucker Realty, which was located in Arlington County. Rucker Realty was incorporated in 1906 immediately after George H. Rucker arrived in Clarendon. Extremely active in the community through his entire life, Ashton Jones was engaged in a number political, religious, financial, and social activities. He owned and developed subdivisions throughout the county including Ashton Heights and Lee Heights. Jones continued his partnership with George H. Rucker & Company until his death in 1960.<sup>11</sup> Ashton Heights is located north of present-day Arlington Boulevard, which serves as a boundary between Ashton Heights and Arlington Heights. Platted subdivisions in the southern portion of the Brookdale tract, south of present-day Ashton Heights, comprise the northern section of Arlington Heights.

On December 10, 1850, William Jenks of Lynn, Massachusetts, purchased 100 acres adjacent to the Brookdale tract from Samuel D. King. The 100-acre tract, known as Alcova, lay east of Glebe Road and north of Columbia Pike. William Jenks invented the breech-loading gun and came to the Washington, D.C. area to be close to the patent office. Jenks developed the property into a 44-acre berry and fruit farm. The Jenks house was located at present-day 3219 7<sup>th</sup> Street South. The house, which was constructed between 1854 and 1855, and portions of the land remained in the Jenks family for more than a century. In 1853, William Jenks’s daughter Sarah Elizabeth married Harvey Bailey of present-day Bailey’s Crossroads. Sarah Elizabeth Jenks Bailey and her husband inherited the farm and house after her father’s death in 1859 and her mother’s death in 1863.<sup>12</sup> The Baileys moved into the Jenks house and continued to operate the farm. Although under Sarah Bailey’s ownership by 1863, an 1865 map of northeastern Virginia indicates the property continued to be known as the “Wm. Jenks” farm.<sup>13</sup> After the death of her husband, Sarah Bailey continued to run the farm with the help of her son, Francis (Frank) Hood Bailey.

Sarah Bailey was a prominent member of the burgeoning farming community in the southern portion of Arlington County. In 1861, Federal troops took possession of the community’s church, Hunter’s Chapel, for use as a picket post, then as a blockhouse, a commissary, and finally as a stable. The church was ultimately torn apart to build barracks for the troops. From the end of the Civil War (1861-1865) until 1893, the congregation worshipped in the Columbia School House on Columbia Pike. In 1893, Fred Bradbury donated land for a new building, and Sarah Bailey mortgaged her farm to raise funds for the church’s construction. Sarah Bailey also worked to get Congress to settle a claim for the destruction of the community’s first church by Federal troops. The claim was settled in 1900 for the sum of \$3,000. To honor her efforts, the Columbia Pike Methodist Church installed a memorial window for Sarah Bailey. In 1947, the church moved again.

---

---

The Arlington Methodist Church was constructed at 716 South Glebe Road on the west side of South Glebe Road at 8<sup>th</sup> Street South, which is located in present-day Alcovia Heights. Sarah Bailey's memorial window was transferred to the new edifice.<sup>14</sup>

Upon Sarah Bailey's death in 1909, her older children were deeded small parcels of land, while Frank received the house and remaining land. Subdivision of Sarah E. Bailey's estate began in 1910, one year after her death. The subdivided tract consisted of approximately 4.6 acres. The Sarah Bailey subdivision was preceded by two subdivision plats in 1909 that would also become part of Arlington Heights: the B. M. Smith addition and the Penrose addition. B. M. Smith was a local architect credited with residential design in Washington, D.C.<sup>15</sup> Although Smith had experience as an architect, it is unknown whether he designed or built any of the earlier dwellings located along South Highland Street.

At the turn of the twentieth century, around the time subdivision platting was beginning in Arlington Heights, many Washingtonians began seeking refuge from the urban setting of the nation's capital. The rush of residents to the area was a result of the established transportation systems between Arlington County and Washington, D.C. However, the influx of new residents required the installation of more amenities, new roads, and more public transportation routes. Railways were initially responsible for development outside the nation's capital; however, the increasing number of bus lines allowed development to move away from the railroad lines. Four bus lines operated between Alexandria, Fairfax and Arlington counties, and Washington, D.C., which, coupled with the increasing acceptance of the automobile, made the Arlington Heights neighborhood an increasingly attractive location to commuters. A substantial number of local developers and builders recognized the economic prosperity and residential possibilities in Arlington County and began to subdivide the area, creating neighborhoods supported by small local commercial enterprises.

The first two decades of the twentieth century in Arlington Heights are characterized by the increasing subdivision of land with five subdivisions recorded during the 1920s. Despite the increasing subdivision of land in Arlington Heights, the demand for housing did not increase until the late 1930s, so there was little construction on these new lots. One developer, J. P. Mann, was active in Washington, D.C. real estate as early as 1909 when he purchased three combined stores and dwellings along Wisconsin Avenue in Georgetown.<sup>16</sup> While local real estate firms and builders developed most neighborhoods in Arlington County, Washington, D.C., real estate firms and builders dominated the development of Arlington Heights.

The Great Depression (1929-1941), commonly marked by the stock market crash in October 1929, created widespread unemployment throughout the United States. In an attempt to jump-start the economy and provide employment for all classes of Americans, the administration of Franklin Delano Roosevelt created the New Deal programs, which more than doubled the number of available civilian jobs between 1930 and 1940. The Works Progress Administration, launched in 1935, created an enormous demand for professional and white-collar workers in Washington, D.C., as well as a large number of construction and blue-collar workers throughout the United States.

Washington, D.C. was one of the cities hardest hit by the housing shortage during the early 1930s. Due to the rise in government workers employed by New Deal agencies, the city's vacancy rate dropped from 12.5 percent in mid-1933 to 0.5 percent in 1934.<sup>17</sup> Arlington County, with its new public water and sewer systems and easy commutes to and from

---

---

Washington, D.C., was an attractive alternative to living in the city. Between 1930 and 1940, Arlington County doubled in size from 26,615 to 56,200 residents, making it the fastest developing county in the Washington metropolitan area.<sup>18</sup> At that time, forty-three percent of the total population of Arlington County worked for the United States government. The new population of Arlington in 1940 was young and educated. Eighty-five percent of the residents were under fifty years of age, twenty percent held college degrees.<sup>19</sup>

The 1934 subdivision of Glebe Manors coincided with the increasing demand for housing that resulted from Roosevelt's New Deal programs. The *1936 Sanborn Fire Insurance Map* indicates that a farm, its three associated outbuildings, and a small pond remained on the subdivided tract two years after its platting. Construction began in 1938, and between 1938 and 1940, Joseph L. and Anthony Gaddy constructed freestanding single and semi-detached twin dwellings along 1<sup>st</sup> Road South, 2<sup>nd</sup> Street South, and South Glebe Road. In 1942, the Gaddy brothers both lived on 1<sup>st</sup> Road South in their development: Joseph lived at 3614 and Anthony lived at 3618.<sup>20</sup>

The original boundaries of Arlington Heights were malleable. Subdivisions platted in 1936 and 1937 were intended for inclusion in other neighborhoods but eventually became the northern and eastern boundaries of Arlington Heights. Also in 1936, the *Washington Post* announced the opening of a new house designed by B. M. Smith. The dwelling was located at 837 South Wayne Street and sold for \$9,950. The article states the "new brick, colonial-type home is situated on a beautifully landscaped lot with a large shade tree" in Arlington Heights.<sup>21</sup> Presently, South Wayne Street is part of the Penrose neighborhood, located east of Arlington Heights.

Builders and developers Vaughn and Usilton, Inc. subdivided a large portion of Arlington Heights between 1937 and 1942. The firm immediately constructed dwellings on the tracts they subdivided. A *Washington Post* article from July 1938 discusses the "highly restricted character on a 23 1/2-acre tract running east from Glebe road to South Highland street and north from Second street to Fifth street, in Arlington," comprising the Vaughn and Usilton development. The development contained 147 lots, and by the middle of 1938, seven dwellings on South Irving Street were completed with three more houses under construction. The *Washington Post* described the lots as large and level, while publicizing that amenities such as street curbs, sidewalks, sewers, gas, and electric lines had already been paid for and installed. Two bus lines served the neighborhood, which was conveniently located within two and three blocks of a grade school and a high school, respectively. During the four years prior to their Arlington Heights development, Vaughn and Usilton were noted for constructing "many fine homes in Arlington." Members of the firm were well known in the building and real estate field, having connections with the most prominent local firms.<sup>22</sup>

As the *1938 Franklin Survey Map of Arlington County* indicates, the subdivision plat for the Vaughn and Usilton addition to Arlington Heights included two streets – South Lincoln and South Kenmore – that were never constructed yet exist on county planning maps from the period. The non-existent South Lincoln Street caused a problem in late 1946 when Vaughn and Usilton petitioned to rezone this portion of their subdivision from residential to commercial. The firm hoped to entice the Washington, D.C. department store Woodward and Lothrop to build a branch along the 200 to 400 blocks of South Lincoln Street. The county board delayed rezoning actions and local residents put up fierce resistance. In 1948, Arlington Heights resident and attorney William E. Day challenged the rights of Vaughn and Usilton to build a commercial structure along the non-existent South Lincoln Street.<sup>23</sup> The residents prevailed and the department store was

---

---

never constructed. This portion of the Vaughn and Usilton addition was not developed until the mid-1950s when a high-rise apartment building was constructed.

In 1938, M. E. Spink subdivided Anton Zimmerman's farm, which contained approximately 7.4 acres. Between 1938 and 1939, Clarence W. Gosnell, president of the Clarence W. Gosnell, Inc., built the majority of the dwellings in the M. E. Spink subdivision. Gosnell's firm was active in both Washington, D.C. and Arlington County, like J. P. Mann, his practice was based in Washington, D.C., continuing the trend of Washington, D.C. real estate firms and developers working in Arlington Heights.<sup>24</sup>

A substantial addition occurred between 1938 and 1939 when Mace Properties subdivided and built twin dwellings on Miss Bertha Gray's 19-acre tract in the southern portion of Arlington Heights. Mace Properties does not appear to have owned the tract of land as building permits specify Mace Properties to be the builder, and the *1938 Franklin Survey Map of Arlington County* indicates Miss Gray continued to own the tract in 1938. Miss Gray served as the recording secretary for the Methodist Home of the District of Columbia in 1938 and 1939.<sup>25</sup> The addition ran south from 8<sup>th</sup> Street South to Columbia Pike and east from South Glebe Road to South Highland Street. The Westmont addition was the southernmost addition to Arlington Heights. Responding to the need for affordable and high-quality housing, Mace Properties, Inc., which was owned by Miles A. Mace, constructed ninety-one semi-detached twin dwellings in the Westmont subdivision. Following the principles set forth by the Federal Housing Administration (FHA) and responding to the need for affordable housing, Miles A. Mace developed several neighborhoods in Arlington County in the early twentieth century that provided affordable housing to the growing population. Mace, who lived in Arlington County, was a real estate broker.<sup>26</sup> He was only twenty-six years old when he played a role in developing the Arlington community of Over-Lee Knolls, which was advertised in 1926 as "Virginia's Ideal Suburb."<sup>27</sup> In 1930, Mace constructed "Arlington County's first modern apartment house," on Garrison Road in Clarendon.<sup>28</sup> Mace joined forces with Adolph F. Thelander in 1937 and established Mace Properties, Inc. with Thelander serving as vice president.<sup>29</sup> Mace went on to develop several residential communities in Arlington County, financed by the FHA. These communities, including GlebeWood Village (1937, 1938), Westmont (1939), Westover (1939-1940), and the Highlands (1940), allowed Mace to offer housing at a lower cost and to build houses in larger quantities.

Mace experimented with different types of housing in each community, yet each type emphasized affordability. In GlebeWood Village, for example, Mace constructed Tudor Revival-style row houses; whereas, in the Highlands and in Westmont, he built semi-detached Colonial Revival-style twin dwellings. Mace Properties was considered a "civic-minded pioneer" because of its high construction standards and low building costs. Mace's houses were hailed for their individuality and structural quality, attributes typically associated with higher-cost neighborhoods.<sup>30</sup> The Westmont twin dwellings are constructed with steel beams, joists, and concrete blocks. The dwellings have six-course American-bond brick veneers. The floors and ceilings were also constructed of concrete to help prevent shrinkage, decay, and termite damage. The intention of Mace Properties, Inc. was to "retain all of the quality of materials and equipment that have been embodied previously in more costly ones. These houses, however, are being made available to buyers on terms comparable with very low rentals."<sup>31</sup> New houses in Westmont sold for \$4,335 with a \$435 cash down payment. Although some houses sold for as much as \$4,490, the Mace houses offered large rooms, modern heating systems, solid construction, and a ten-minute drive to Washington, D.C. Purchasing materials in large orders directly from suppliers and

---

---

mass construction methods kept costs low. The popularity of this development is evident as 120 houses were sold within just thirty-three days; fifteen families purchased houses in Westmont on their first visit to the development. C. E. Branner, president of Kelley, Steele & Branner, directed sales for the development.<sup>32</sup>

The 1939 Virginia Park addition subdivided 5.18 acres that had belonged to James McConville. Fred G. Behm and Charles F. Beger built fourteen houses in this subdivision. The dwellings were large, affordable, and sold quickly. As the *Washington Post* noted in July 1941, “three of 14 skillfully planned, spacious Colonial type homes in Virginia Park, Arlington, Va., just announced by J. Lee Price, exclusive agent for Behm & Beger, builders, have already been sold.”<sup>33</sup> The three bedroom, one-and-a-half-bath dwellings cost \$7,650. The Behm & Beger dwellings also had full basements, two fireplaces, a garage, and other modern features.<sup>34</sup> In 1942, the *Alexandria, Arlington, and Fairfax Telephone Directory* indicated that Charles Berger resided at 311 South Garfield Street and Fred Behm lived at 212 South Garfield Street in Virginia Park.<sup>35</sup>

In 1941, builders Adelman and Wolf constructed sixteen dwellings in the Sarah Bailey subdivision. The dwellings were two-story, three-bay Colonial Revival-style houses with optional screened-in porches. The house at 801 South Ivy Street was advertised for sale in the *Washington Post* on May 8, 1948. The Arlington Realty Company acted as the sales agency. “The house features three bedrooms, sliding closet doors, a tiled bathroom, a half bath, a heatolater” and fan for the living room fireplace, a family dining room, equipped kitchen, a full basement, automatic gas heat, rear screened porch, and a fenced lot. Arlington Realty Company was asking \$17,500 for the house.<sup>36</sup> This particular dwelling from Adelman and Wolf was selling for three times as much as Mace’s semi-detached twin dwelling, which were located just one block to the south.

Construction on the remaining portion of Glebe Manors subdivision began in 1941. The Highland Hall (present-day Arbors of Arlington) garden-apartment complex consisted of five buildings, which took one year to construct. Because Washington, D.C. was one of the cities hit hardest by the nationwide housing shortage, one hundred and seventy-six apartment buildings and garden-apartment complexes were constructed throughout Arlington County between 1934 and 1954.<sup>37</sup> The first large-scale housing project reviewed by the Large-Scale Housing Division and approved by the FHA was located in the Washington, D.C. suburb of Arlington, Virginia. Colonial Village (1935, 1939, 1954-1955) was the real estate venture of Gustav Ring. Ring, an active developer before the Great Depression, took advantage of the housing climate in Washington, D.C. and the new programs installed by the FHA. Ring purchased a site adjacent to the Arlington County Courthouse that was convenient to downtown Washington, D.C. by a fifteen-minute commute. After the approval of an FHA loan from the New York Life Insurance Company, construction began in April 1935. When the three phases of Colonial Village were completed in 1955, the complex provided 974 rental units.

The FHA took advantage of Colonial Village’s success and used it as a model for promoting future projects. Ring’s use of the Colonial Revival style became the preferred style for garden-apartment buildings, especially in the Washington, D.C. area. Although Highland Hall is smaller than most garden-apartment complexes constructed during the 1930s, 1940, and 1950s in Arlington County, the complex follows many of the principles established by Ring and the FHA. To promote ventilation, views, privacy, as well as variety, the buildings in garden-apartment complexes were often arranged in interlocking patterns that followed the site’s topography.<sup>38</sup> The FHA provided several examples of recommended site

**United States Department of the Interior  
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET**

**Arlington Heights Historic District  
Arlington, Virginia**

**Section**   8   **Page**  167 

plans and discussed their advantages in terms of view, courtyards, ventilation, and privacy. The basic plans included the "Strip," "Tee," "Cross," "Ell," "Zee," and "Offset Cross." These units could then be combined to create a group of apartment units, illustrated by the FHA as "Typical Unit Combinations."<sup>39</sup> The FHA's reasoning behind these preferences was to ensure that the property would outlast the amortization period and to protect the residents that would occupy the buildings.<sup>40</sup> Highland Hall was comprised of five Tee-shaped buildings improving the views, ventilation, and privacy of the 114 units. In 1955, there were only six vacant units throughout the five buildings. *Hill's Arlington County Directory* lists the occupation for only one resident of the complex – a nurse.<sup>41</sup>

The FHA did not officially state a preferred architectural style for garden-apartment complexes. However, the favored style for garden-apartment complexes of the 1930s and 1940s was the Colonial Revival style. While Colonial Village exhibits more defined Colonial Revival details such as door surrounds, pediments, and quoins, Highland Hall presents minimal Colonial Revival-style ornamentation, reflecting the cost-cutting measures enforced by the FHA. Highland Hall illustrates the Colonial Revival style through its symmetrical fenestration and brick quoins on the corners of the buildings. While alluding to the Colonial Revival style, Highland Hall also displayed detailing influenced by the Moderne styles; the Highland Hall complex entrances are set on diagonals and enclosed with glass blocks, indicative of the Moderne style. The details are similar to those presented by several apartment buildings and complexes in Arlington County that were designed by Mihran Mesrobian. Highland Hall is a transitional apartment building complex because it continued to employ the FHA guidelines while experimenting with modern materials and ornamentation.

DEVELOPMENT BETWEEN 1945 AND 1957

Platting the remaining empty tracts and new residential construction flourished after World War II. Carlos M. Flower's 1945 addition subdivided Belle P. Mck. Beem's 5.18-acre tract. In 1950, Flower Properties, Inc., owned by Carlos Flowers, built fifteen ranch houses along the 300 and 400 blocks of South Fenwick Street. Flower Properties, Inc. was one of the few local builders engaged in Arlington Heights.

Arlington Heights is home to the only synagogue in Arlington Heights. The first Arlington Jewish Center was located at 3150 Wilson Boulevard in Clarendon. Due to the increasing demand for more space, the center purchased land at a new location – the intersection of Arlington Boulevard and South Fenwick Street in Arlington Heights. Fundraising took place throughout the 1930s and groundbreaking for the center occurred on June 8, 1947. The groundbreaking ceremony featured an address from Representative Sol Bloom, a democrat from New York, as well as many local civic and religious leaders. An avid Zionist, Sol Bloom explored many careers before entering the United States House of Representatives in 1920. Bloom owned a chain of music departments in department stores nationwide and dabbled in real estate upon moving to New York City in 1903. Bloom is most famous for developing the mile-long Midway Plaisance for the 1893 World's Columbian Exposition in Chicago. Chair of the House Committee on Foreign Affairs in 1938, Bloom later served as a delegate to the convention that established the United Nations.<sup>42</sup>

The first phase of construction on the Jewish Center included an auditorium with a seating capacity of 400 persons at an estimated cost of \$70,000.<sup>43</sup> On July 27, 1947, the *Washington Post* published a drawing of the building, which was

**Section** 8 **Page** 168

---

---

already under construction. The two-story fireproof building is constructed of stone and brick. The building exhibits the Colonial Revival style with its two-story Tuscan columns fronting the entrance, pediments with oculus windows, and a denticulated frieze board. The drawing caption states the building houses a temple, chapel, meeting rooms, classrooms, social hall, kitchen, stage, and clubroom at a cost of \$200,000.<sup>44</sup> Elmer Cappelman, a local architect, designed the center. Cappelman was well known for his use of the Colonial Revival style.<sup>45</sup> Victor R. Beauchamp, former member of the Washington, D.C. postwar construction planning committee, was the general contractor for the project.<sup>46</sup> Beauchamp's firm was active throughout the Washington, D.C. metropolitan area during the late 1940s and 1950s.<sup>47</sup> The new Arlington Jewish Center officially opened on December 5, 1947; Rabbi Dr. Ira Sud conducted the first services.<sup>48</sup>

Within less than a decade, the Arlington Jewish Center needed to expand its facility. A June 4, 1954 article in the *Washington Post* published a drawing of the proposed addition to the Arlington Jewish Center, illustrating the present-day appearance of the building. At this time, a campaign began to raise the \$150,000 needed to build the proposed addition. The addition would add two floors in an effort to accommodate the growing membership.<sup>49</sup> The addition would fulfill the original vision of the center as a multi-purpose facility, as well as completely alter the architectural style of the building from the Colonial Revival style to a design that is illustrative of the Modern Movement.

Arlington Heights features one Lustron house at 2915 7<sup>th</sup> Street South. Located within the Arlington Plateau subdivision, the Lustron dwelling was assembled in 1949. Carl Strandlund was the driving force behind the Lustron Corporation and their distinctive domestic and commercial structures. Strandlund was vice-president of the Chicago Vitreous Enamel Product Company, which manufactured porcelain-enameled steel panels for gas stations. While requesting materials from the Civilian Production Administration (CPA) in 1946 to build more enameled steel gas stations, the CPA suggested designing a house from the company's porcelain-enameled steel panels. Strandlund created a subsidiary of Chicago Vitreous – the Lustron Corporation – and hired the Wilmette, Illinois, architectural firm of Blass and Beckman to draw up plans. The exterior and the interior of these one-story, three-bay houses were built entirely of stamped steel. The dwellings consisted of 3,000 prefabricated parts.<sup>50</sup>

Eleven Lustrons were constructed in Arlington County between 1949 and 1950 and four continue to stand in their original lots. All the Lustrons assembled in Arlington County were the Westchester Deluxe Model 02. The Westchester Deluxe Model 02 features a 14' x 16' living room, a 9' x 10' dining room, a 6' x 17' kitchen, a 7'6" x 8' utility room, a 5' x 10' bathroom, a 12' x 12' master bedroom, and a 10'6" x 14' second bedroom. All Lustrons have eight-foot ceilings. Edward S. Sanders purchased lots 84, 85, and 86 on 7<sup>th</sup> Street South from Norman T. Florence and B. Eschelmann in December 1949. Building permit 23634 was issued on December 5, 1949 to construct the dove-gray Lustron dwelling. The Sanders owned the Lustron until 1952 when they sold it to J. Walter Foy and his wife. During their ownership, the Foyes added an extension to the porch with a flat roof and jalousie windows. The porch extension created a carport. Mr. and Mrs. Foy sold the property to Anna Kline Van Reed in July 1955. The property was later transferred to Bernard Thomas and Anastasia Helen Palmer who held the property until 1971. In April 1971, Alan Magruder Jr. and Ruby M. Eldridge bought the Lustron. Mr. and Mrs. Eldridge maintained the property for seven years, selling it to Lester N. Morgan in May 1978. Despite numerous owners, the only other exterior alteration was the addition of metal awnings on the southern and eastern windows. The only documented interior modification was the removal the radiant heating system.<sup>51</sup> In 2006, the Arlington County tax assessment records indicate Anita Morgan is the current owner.

---

---

The Leo M. Bernstein and Emerson G. Reinsch addition of 1950 subdivided approximately 7 acres from the Claude B. Withauer tract. Bernstein and Reinsch, developers from Washington, D.C., built forty-one brick-faced dwellings constructed of concrete block between 1950 and 1951. In 1951, the firm was also in the process of constructing dwellings along the 700 and 800 blocks of South Irving and South Highland streets, which were part of the Sarah E. Bailey subdivision. The permits for the seventeen dwellings on South Irving and Highland streets were issued to E. G. Reinsch. The permits indicate the houses are 28 by 24 feet.<sup>52</sup>

Constructed in 1953, the commercial building at 3411 5<sup>th</sup> Street South is located within the Vaughn and Usilton subdivision. The Snell Construction Corporation was both the owner and builder of the commercial building. The permit designated the building as a candy store. The *1959 Sanborn Fire Insurance Map* shows the building was used as a paint store. In 2006, the building is a video rental store.

High-rise apartment buildings constructed in the International Style were introduced into the Arlington County rental market beginning in 1950. High-rise apartment buildings are significant for their efficient use of land in locations served by both public transportation and utilities. The Dominion Arms, located at 333 South Old Glebe Road, was built in 1954. Owners and builders of the Dominion Arms, Murphy and Snell, contracted the Washington, D.C. firm Shannon and Luchs to act as the rental and managing agents for the building. In December 1954, an advertisement in the *Washington Post* declared the Dominion Arms to be “Virginia’s finest luxury apartments.” The advertisement also publicized that the Barnes and Kimel Company department store furnished the model apartment. On January 9, 1955, an advertisement and a short article in the *Washington Post* declared, “The Dominion Arms is Now Renting” and praised the building for having elevators, year-round air conditioning, carpeted hallways, kitchens with garbage disposals, secretarial service, a 275-car parking garage, and swimming pool.<sup>53</sup> An advertisement from the same day declared that these luxury apartments were “devoted to gracious living for people of uncompromising taste.”<sup>54</sup> The 188 units in the Dominion Arms were a combination of 65 efficiencies, 85 one-bedroom, and 38 two-bedroom apartments. Efficiencies ranged in price from \$84.50 to \$99.50 per month, one-bedroom apartments cost between \$112.50 and \$142.50 per month, and the two-bedroom units rented for \$163.50 to \$195.00 per month.<sup>55</sup> The *Virginian*, constructed in 1950 at 1500 Arlington Boulevard, is the only other high-rise apartment building constructed between 1945 and 1954 in Arlington County.<sup>56</sup> The *Virginian* offers a larger proportion of efficiency units than the Dominion Arms, which offers more one-bedroom units than efficiencies.

The 1955 edition of *Hill’s Arlington County Directory* provides occupation information for a small portion of the neighborhood. Arlington Heights featured four building contractors, one general contractor, a lathing contractor, one plumbing and heating contractor, a carpenter, one physician, one nurse, a reverend, a music teacher, an interior decorator, and a real estate agent. The real estate agent was Carlos M. Flower whose firm had constructed many houses in the neighborhood. Like a handful of other developers, Flower lived in his own subdivision at 211 South Garfield Street.<sup>57</sup>

ARLINGTON HEIGHTS TODAY

The subdivision of land in Arlington Heights continued through 1978 although there was little new construction. In 1963,

---

---

T. L. Hinnant subdivided the remaining portion of the F. H. Bailey tract after the demolition of the Bailey house. The 600 block of South Ivy Street was platted as a cul-de-sac. Hinnant constructed five ranch houses on the South Ivy Street cul-de-sac in 1963 and 1964. Another firm, Smith and Francis, Inc. constructed one dwelling on the cul-de-sac. The final dwelling on South Ivy Street was constructed in 1981. The building permit card for the property indicated the dwelling was a parsonage owned by the EME Church [*sic*].<sup>58</sup> The EME church has not been located in Arlington County records. The Arlington United Methodist Church, located on South Glebe Road at 8<sup>th</sup> Street South in Alcova Heights, is the closest church to the purported parsonage. However, a link between the parsonage and the Arlington United Methodist Church has not been established.

In 1970, Arlington County purchased a parcel at the intersection of South Old Glebe Road and 2<sup>nd</sup> Street South from Ned R. Thomas and Phyllis L. Ferrari. The *1959 Sanborn Fire Insurance Map* indicates that a dwelling and four associated structures had been located on this parcel; these buildings were razed in 1967. The plat map attached to the deed of sale indicates that the Arlington County Board also owned the surrounding property.<sup>59</sup> The *1959 Sanborn Fire Insurance Map* also shows five dwellings located along 1<sup>st</sup> Street South, which, at that time, ran parallel between Arlington Boulevard and 2<sup>nd</sup> Street South east of Old Glebe Road. The dwellings along 1<sup>st</sup> Street South – 3305, 3311, 3314, 3321, and 3409 – were demolished between 1963 and 1966. In 1968, before Arlington County purchased the parcel at the intersection of Old Glebe Road and 2<sup>nd</sup> Street South, the county approved a \$6.5 million bond for the construction of a new Thomas Jefferson Middle School and Community Center. At the time the bond passed, Arlington County owned a tract of land between Arlington Boulevard and 2<sup>nd</sup> Street South that extended from Old Glebe Road to South Irving Street. The *1938 Franklin Survey Map of Arlington County* identifies that the majority of this land tract as the property of E. B. Von Every Mount; the tract consisted of approximately 13.5 acres. The 235,000-square-foot building was constructed in 1972 and was used by an average of 1,400 people every day by 1980. The community center and school share a 26-acre playing field/park, which is also used for countywide events such as the Arlington County Fair.<sup>60</sup>

Arlington Heights features three other community facilities that are located outside the historic district boundary. Located in the southeastern area of Arlington Heights are the Patrick Henry Elementary School, the Fenwick Center, and the Columbia Pike branch library. Established in 1925, the Patrick Henry Elementary School replaced Arlington County's first public school – the Columbia School. A permit was issued in 1972 to build a new elementary school, which opened in 1974.<sup>61</sup> The Fenwick Center, located along South Walter Reed Drive, was constructed in 1973. The building continues to house Department of Human Services programs and can accommodate over 240 people. Circa 2005, renovations enlarged the Fenwick Center facility by 3,400 square feet.<sup>62</sup> Also located on South Walter Reed Drive is the Columbia Pike branch of the Arlington County Public Library system. The library is located on the former site of the Thomas Jefferson Junior High School, which was constructed in 1938 and razed in 1972. The permit card states the original purpose of the building was for a technical education center. Presently, the library continues to house the technical education center.<sup>63</sup>

The Arlington Heights Civic Association (AHCA) is an active and well-established community group. Beginning in 1975, the AHCA began working on a neighborhood conservation plan, which was published in 1980. The plan aimed to facilitate the interaction and coordination of community members and Arlington County government in future planning

**Section** 8 **Page** 171

processes. The AHCA hosts the annual Columbia Pike Blues Festival, Arlington County Fair, garden tour, block party, children's Halloween costume party, and a holiday caroling party. Recently, the AHCA, with the assistance of Arlington County, installed pedestrian-friendly street lamps, repaired sidewalks, and rebuilt and renamed Arlington Heights Park. The AHCA meets quarterly to discuss and solve neighborhood issues; they also produce a quarterly newsletter called *Over the Fence*.<sup>64</sup>

**Verbal Boundary Description** (Describe the boundaries of the property on a continuation sheet.)

The northern boundary of Arlington Heights starts at South Glebe Road and runs east along Arlington Boulevard. The boundary then runs south along South Fillmore Street, whose name changes to Walter Reed Drive at 6<sup>th</sup> Street South. The boundary continues along Walter Reed Drive to 7<sup>th</sup> Street South where it turns west. The boundary continues west to South Highland Street where it turns south. The boundary runs south toward Columbia Pike where it runs west behind the commercial buildings that front Columbia Pike. After running behind the commercial buildings on Columbia Pike, the boundary turns north and runs along South Glebe Road to 5<sup>th</sup> Street South. At 5<sup>th</sup> Street South the boundary runs to the east behind the 5<sup>th</sup> Street properties and then turns north along the rear of properties located along South Jackson Street. At 2<sup>nd</sup> Street South the boundary turns to the west and then runs south along the rear of hi-rise apartment building property. The boundary then runs west at 5<sup>th</sup> Street South until it reaches South Glebe Road where it turns north. The boundary veers northeast to follow Old Glebe Road toward 2<sup>nd</sup> Street South where it turns west. The boundary turns north at South Glebe Road and continues to run north until it reaches Arlington Boulevard. The boundaries are shown on the detailed map scaled at 2" = 200'.

**Boundary Justification** (Explain why the boundaries were selected on a continuation sheet.)

Arlington Boulevard, a major automobile thoroughfare, creates a distinct northern boundary to the Arlington Heights Historic District. The boundary turns south and runs along South Fillmore Street and Walter Reed Drive including subdivisions that are located within the Arlington Heights Civic Association boundary. The district boundary turns west along 7<sup>th</sup> Street South and then south along South Highland Avenue to exclude buildings constructed during the 1970s located on Walter Reed Drive south of 7<sup>th</sup> Street South. The boundary then runs west behind the commercial buildings that front Columbia Pike because they do not reflect the residential character of the neighborhood. South Glebe Road forms the western boundary as it runs from the rear of the commercial buildings on Columbia Pike to 5<sup>th</sup> Street South. At 5<sup>th</sup> Street South, the boundary turns east for one block and then runs north toward 2<sup>nd</sup> Street South in order to exclude construction from the late twentieth century. Plat maps from this excluded section date to 1996. The boundary line then runs south to 5<sup>th</sup> Street South and west to South Glebe Road. The boundary follows Old Glebe Road north and the runs west along 2<sup>nd</sup> Street South in order to exclude the late-twentieth-century commercial architecture located on the southeast corner of 2<sup>nd</sup> Street South and South Glebe Road. The boundary then runs north along South Glebe Road in order to include twin dwellings and a garden-apartment complex constructed during the late 1930s and early 1940s.
